

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusions

Based on the data obtained in chapter four, the researcher makes conclusion which is also the answer from the research question, these are the conclusions:

1. Before the researcher gives the treatment by using chain writing method, the researcher did the pre-test to know the students' ability in writing. It can be seen that the average value at the experimental class (X-1) is 51.6, while at the control class (X-2) is 42.8. These values fall into the need improvement based on scoring system. Therefore, students' writing ability at the first grade of MAS Raudlatul Irfan Tangerang is poor or need improvement before being given treatment.
2. The researcher applied treatment to class X-1 using the chain writing method and to class X-2 without using the chain writing method; the treatment was conducted in two meetings; after the treatment was given successfully, the

researcher administered a post-test to the experimental and control classes; it can be seen that the experimental class's post-test average value is 74, while the control class's average value is 56. It signifies that after receiving treatment in the experimental class, the scores from the two classes differ significantly. Based on the data shown above, the researcher may conclude that

3. using the chain writing method has a significant effect on improving students' writing abilities at MAS Raudlatul Irfan Tangerang's first grade.

B. Suggestions

Based on the conclusion above, the researcher would give some suggestion as follows:

1. For Teachers

To the teachers who use chain writing method in the teaching and learning activities, it is important to give the clear instruction about how to do the chain writing method. It is useful for students in order they can engage the activities well. Furthermore, the teachers are suggested to control each group to

ensure that every student is participating in the writing process and in order to keep the class conducive.

2. For Students

The students are suggested to be responsible in their group working and more active to participate in the writing process. In addition, students should use the time effectively in writing descriptive text through chain writing method.

3. For Further Researchers

The researchers should understand well about chain writing method, they can explore it from various sources. And the researchers are suggested to practice what they already know and learn about teaching, in order they can manage the class effectively and can reach the objectives of the research well.
