(i.e., its motivation, the gap in understanding that the paper is trying to address, and a summary of theoretical contributions). Paragraph 3 explains what we need to find out. Paragraph 4 explains briefly what this paper will do to find out, the method, etc. Paragraph 5, with no references, explains the structure of this paper.

Methods: This is one of the most critical parts of the paper that found lacking detail. The method should be adequately described to show how the research was conducted to improve clarity and transparency. What were the reasons for using the STATA 13 software? How is the model fitted? How the validity and reliability of the questionnaire were measured before sending the questionnaires?

Results. In the discussion section, for each case study that you have identified separately, the results should be written, what effects it has on the main result?

The conclusion shows the final results of your research (you need a conclusion for your research). Also, the conclusion should be revised to highlight the aims of the study, summarize the finding, and the significance and usefulness of the study.

Please clarify what are the theoretical and practical contributions of your research.

What are the results of your research, and how can it help your community?

It is better to transfer these two parts (Limitation and future directions) after the conclusion.

Summary

The study presented an important topic. However, the research does not match what is wanted in its current form. It is missing a level of detail needed to understand the study result, the impact of the results, and the research contribution. Perhaps the authors are likely close to the topic they are skipping over details that they know, but the reader would not. Overall, the paper requires more information and focus.

Reviewer 1: Methods: the researcher used Hierarchical analysis to model nested data more appropriately based on his research model (Affective commitment, privacy legislation, whistle-blowing, career opportunity, supervisor support)

Results: compatible with desire expectation (Model)

Interpretation: In depth

Other comments.

## Reviewer 2: Dear author(s)

It was my pleasure to review your manuscript entitled "CAREER OPPORTUNITY OF WHISTLE-BLOWER IN THE WORKPLACE: THE ROLE OF PRIVACY LEGISLATION AND SUPERVISOR SUPPORT" and advise you to prosper your current research project. In my view, your topic has touched on a critical issue in a fascinating context. However, there are many spaces to be improved in terms of argumentation, theoretical background, research method, and findings. I hope my below comments would help you develop your work into groundbreaking research in your domain. The abstract should indicate the innovation of the work.

The positioning of the paper is not entirely clear. It is better to explain the gap in this article further.

The introduction should clearly illustrate (1) what we know (the key theoretical perspectives and empirical findings) and what we do not know (major, unaddressed puzzle, controversy, or paradox does the study address, or why it needs to be addressed and why this matters) and (2) what we will learn from the study, and how the study fundamentally changes, challenges, or advances scholars' understanding. Much sharper problematization is required so that the introduction draws the reader into the paper. At the end of the introduction, we should have a clear idea of what the paper is about "The paper is suffering from a fluent and clear language. Some parts of the paper are not understandable due to bad English.

٢

Best of luck with the further development of the paper.

Reviewer 3: Methods: It needs more into on Sampling. Research Instrument and process.

Results: Discussion needs to be more substantiated by latest studies as it was outdated.

Interpretation: Practical Implications need more justification based on current practices in Indonesia

## Other comments.

1- This study doesn't clearly define Symptoms in Indonesia

2- The Introduction needs a streamline of background

3- There is highly focus on Whistle Blowing rather than other important variables in the study.

4- Line 31, H1b should be amended to:

H1b: Perceived privacy legislation will moderate the relationship between affective commitment and employee's whistle-blowing behavior.

5- Update the Literature Review by more recent studies in past 3 years.

6- Line 52, H2b should be amended to:

7-H2b: Perceived supervisor support will moderate the relationship between whistle-blowing and employee career opportunity.

8- The Intervening role of Whistle Blowing based on the study's Framework had not been discussed and analysed accordingly.

9- Conclusion and discussion can be merged but should be enriched by recent studies.
