

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

Based on the results of data analysis that has been researched on the use of spinning wheel media for speaking learning in understanding descriptive texts, the results of the study show that learning using the spinning wheel found that there was a significant difference between students' speaking skill before and after using the spinning wheel. So the researchers concluded that the spinning wheel media was effectively used in the process of learning speaking in understanding descriptive text.

Then, the results of the post-test data analysis showed that there was a significant difference between the speaking achievement of students in class VIII.B who used the spinning wheel media and class VIII.A who did not use the media. It can be seen that the average value of the class using the spinning wheel media is higher than the average value of the conventional class. Therefore, the findings of this study answer the research question, "How effective is the spinning wheel media in improving students' speaking skills at MTs Al-Ma' arif Kabupaten Serang?" The answer is that the spinning wheel is effectively used in improving students' speaking in descriptive text in class VIII MTs Al-

Maarif Kabupaten Serang. The average pre-test score of students in the experimental class was 62 while in the control class was 60.6 and the post-test score of the experimental class was 73.5 while the control class was 68.8.

B. Suggestion

Based on the previous conclusions, some suggestions will be offered by researchers to several parties as follows:

1. For English teachers, they should be diligent in seeking new ideas to create a more conducive and interesting learning environment, besides that, teachers should also place students at the center of learning (changing the paradigm from teacher center to student center) so as to create a learning environment that is not boring and the teacher must also be able to motivate students to increase their knowledge especially covering English vocabulary.
2. For students, they should be able to change their mindset if learning English is easy if they study and try seriously. Apart from that, they also have to realize that English will be their need in the future. Then, they must also try to improve their speaking skills in order to be able to communicate with foreigners.

3. For researchers, this research can be an illustration for future researchers, but they must understand and evaluate it in a larger subject to see whether this media is effective or not for students and the results of this research can be used as a reference for other researchers who want to carry out research on speaking skills with the spinning wheel method of descriptive text. Finally, the researcher hopes that this research can be a reference to enrich the body of knowledge.
