CHAPTER V
CONCLUSION ANDSUGGESTION

A. Conclusion

Based on research problems about student difficulties in carrying out online learning during a pandemic and what are the solutions to online learning obstacles. Can be concluded that:

1. Online learning obstacles by fifth semester students of UIN Sultan Maulana Hasanuddin Banten majoring in English education that when carrying out online learning experienced barriers when carrying out online learning, including unstable internet connections making learning ineffective so that the material explained by the lecturer was left behind, understanding the material given by lecturers is difficult for students to understand, environmental disturbances, decreased learning motivation, more assignments than offline learning, and also poor time management, such as shifting class schedules on holidays.

2. The solution to the problem of online learning is to ensure that the area or place of learning is in a condition that is reached by the signal so that it can carry out online learning comfortably. In difficulty understanding the material. Researcher recommended that at every meeting the lecturer provides material that has been explained, so that students can review material that has not been understood. In time management, it is better to move class schedules instead of on holidays, because students need rest to refresh their brains. In carrying out online learning it makes you tired so it's good to maintain health, both physical and non-physical in various ways, such as sports, talking with family or friends, etc.

B. Suggestion

   After concluding the research, the researcher will give advice to English teachers, students and future researchers about students' barriers to online learning during the COVID-19 pandemic. The suggestions include the following :

1.Lecturer

   a) Create innovation in carrying out effective online learning so that it is not monotonous in its implementation.

   b) Understand the use of applications as learning media and also understand the condition of students.

   c) teachers should never stop to motivate students to be enthusiastic about learning, especially in online learning.

   2. The students

   a) Students remain enthusiastic about learning and maintain mental health when carrying out online learning during the pandemic.

   b) Students must focus on learning so that students can have a good understanding of the material.

   c) Students can apply problem solutions when carrying out online learning.

3. The next researcher

   a) For researchers who conduct research related to this topic, the research results can be used as a reference in different contexts.

   b) Researchers hope to make research with this topic so that it can be make it better.

   c) Researchers hope that future can conduct research in a wider area.
