CHAPTER V

CONCLUSION AND SUGESTION

A. CONCLUSION

In this chapter the researcher will present the conclusions from the overall results of the research that have been discussed previously. In addition, researchers try to provide some suggestions related to the results of data analysis that might be useful for teachers and students.

After analyzing the data in chapter IV and from the research results, the students' vocabulary was very lacking before being given chain cards and it can be concluded that the data presents the significance of chain cards for students' vocabulary mastery. Chain cards have a big role in improving students' vocabulary mastery. This has been provided by analyzing the data from the pre-test and post-test supported by the vocabulary test.

From the research conducted at MTs Tunaswangi it was found that the students' vocabulary mastery skills using the chain card strategy were better. With a tcount value of 4.287 and a ttable of 2,106, df 38, a significance of 5%, the H_1 statement is accepted. It can be concluded that the application of a chain card strategy can improve students' vocabulary mastery abilities. This is because the different learning atmosphere between the experimental class and the control class can greatly affect students' thinking skills.

B. SUGGESTION

Based on the research findings, the researcher tries to provide some suggestions after completing this research. Suggestions are listed below:

1. For students

   a. Students must diligently read English texts to know foreign languages.
   b. The students should make a vocabulary list to help in memorizing it.
   c. The students should be more active in participating in the teaching and learning process to build their knowledge.

2. For teachers

a. Teachers should try creative and innovative methods to improve students' vocabulary mastery or their competence especially in English.

b. Teachers must be more creative in the teaching and learning process to avoid student boredom.

c. The teacher suggests the application of chain cards as a teaching technique to improve vocabulary mastery.

3. For school

a. It would be better if schools provide additional time for English lessons to improve students' English. The material provided and the media used must be different from the usual time.

b. Vocabulary extracurriculars are needed to improve students' vocabulary mastery. This means students who are really interested in English can practice their vocabulary.

4. For Other Researchers

It is suggested to be able to conduct research using factors that influence learning English on similar topics. Hopefully with more research, the results will be more useful to improve the process of learning English
