

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### A. Conclusion

Based on data obtained from research findings, it can be concluded that teaching writing narrative texts using Padlet Application is effective in increasing student grades compared to the grades of students taught using conventional methods. Teaching narrative writing using Padlet Application helps students develop ideas. This interpretation is supported by student scores which were analysed using the t-test. This shows that the average score of the experimental class at the pre-test was 60.33 and changed to 74.97 on the post-test. For the control class the average pre-test score was 61.20. And it changed to 69.33 on the post-test.

In conclusion, the experimental class experienced a higher increase in the average post-test score after given treatment compared to the control class. Based on hypothesis testing, it was obtained that  $t\text{-test } 2.138 > t\text{ table } 1.672$ , meaning that the Alternative Hypothesis ( $H_a$ ) was accepted and the Null Hypothesis ( $H_0$ ) was rejected. Therefore, this proves that the use of the Padlet application in teaching writing narrative texts to class X MAN 2 Kabupaten Tangerang is effective. And researchers concluded that students' scores increased in all aspects of writing, including content, organization, vocabulary, grammar, and mechanics.

#### B. Suggestion

In the teaching and learning process teachers must be able to make teaching and learning activities fun and enjoyable for students. Therefore, students do not easily feel bored when they must write narrative texts and have high motivation in learning it. Teachers can

evaluate or provide feedback after the teaching and learning process by using the Padlet application to improve students' writing skills. Based on the research results, the researcher would like to provide several suggestions as follows:

1. For teachers, teachers observe what students need in writing classes and encourage students to improve and make the writing learning process more effective. Teachers must be more creative in choosing media in writing classes. Therefore, using the Padlet application can make students' writing skills more effective. So, it influences improving writing skills.
2. For other researchers, other researchers can develop their own research related to the Padlet application which is used to improve students' writing skills. It is hoped that with this research teachers and students can obtain detailed explanations and information.
