## CHAPTER IV

## RESULT OF THE RESEARCH

## A. Description of Data

In this chapter, the writer would like to present the description of the data obtained. As the writer stated at the previous chapter that the population of the study was the second grades of MTs MATHLA'UL FALAH SIREMEN SERANG in academic year 2017/2018, as tested in this chapter, the writer took 35 students as the sample from 70 students from all $2^{\text {nd }}$ grade.

Details of the research implementation time as follows: in the research, the first to do is pre-test and pre-test done on 28 February 2018. First lesson plan for control class and experimental class circling on Sunday 4 march 2018, second lesson plan for control class and experimental class circling on Wednesday 7 march 2018, and third lesson plan for control class and experimental class circling on 11 march 2018, and post- test implemented at the same time with last lesson plan.

The goal of the research is intended to prove the accusation of data in accordance with the research title. To prove it, the writer provided the research of data obtained as followed:

## a. The Calculation of Control Class from Pre-test Score as Y

 VariableTable 1
Score of Pre- test from Control Class as Y Variable.

| No | Respondents | Score |
| :---: | :--- | :---: |
|  |  | Pre-test |

## 1. Determine Interval Class

| Determine Range : |  |
| :--- | :--- |
| $\mathrm{R}=\mathrm{H}-\mathrm{L}+1$ |  |
| $=59-21+1=39$ | Determine interval class (k) <br> between $10-20$ |
| i $\quad \underline{\mathrm{R}}=\underline{39}=$ it is had better getting result |  |

It got $i=3$ because 39: $3=13$ (between $10-20$ ). As the result, the frequency distribution from pre-test of control class as follows:

## 2. Make Frequency of Distribution Score

Table 2
The Frequency of Distribution Score from Pre-test of Control Class

| Interval | (f) | (X) | $\mathrm{X}^{2}$ | f. X | f. $\mathrm{X}^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $21-23$ | 3 | 22 | 484 | 66 | 1452 |
| $24-26$ | 4 | 25 | 625 | 100 | 2500 |
| $27-29$ | 1 | 28 | 784 | 28 | 784 |
| $30-32$ | 2 | 31 | 961 | 62 | 1922 |
| $33-35$ | 1 | 34 | 1156 | 34 | 1156 |
| $36-38$ | 7 | 37 | 1369 | 259 | 9583 |
| $39-41$ | 2 | 40 | 1600 | 80 | 3200 |
| $42-44$ | 4 | 43 | 1849 | 172 | 7396 |
| $45-47$ | 3 | 46 | 2116 | 138 | 6348 |
| $48-50$ | 3 | 49 | 2401 | 147 | 7203 |
| $51-53$ | 2 | 52 | 2704 | 104 | 5408 |
| $54-56$ | 2 | 55 | 3025 | 110 | 6050 |
| $57-59$ | 1 | 58 | 3364 | 58 | 3364 |
| $\sum \sum$ | $\mathbf{N}=\mathbf{3 5}$ |  |  | $\sum \mathbf{f . X}=\mathbf{1 3 5 8}$ | $\sum \mathbf{5 6 3 6}=\mathbf{N}^{2}=$ |

## 3. Determine Mean, Median and Modus Score

| Determine mean of score (Mx1) $\begin{aligned} \text { My1 } & =\frac{\sum \mathrm{f} . \mathrm{X}}{\mathrm{~N}} \\ & =\frac{1358}{35} \\ & =\mathbf{3 8 , 5} \end{aligned}$ | Determine midpoint of data (Mdn) $\operatorname{Mdn} 1=\mathrm{b}+\mathrm{p} \cdot \frac{0,5 . \mathrm{N}-\mathrm{F}}{\mathrm{f}}$ <br> - $\mathrm{b}=35 / 2$ <br> $=17,5$ (it lies at $36-$ <br> 38), so it | Determine the most frequently appear (Mo) $\begin{aligned} & \mathbf{M o}=\mathrm{b}+\mathrm{p} \cdot \frac{\mathrm{~b}_{1}}{\mathrm{~b}_{1}+\mathrm{b}_{2}} \\ & \mathrm{~b}_{1}=7-1=6 \\ & \mathrm{~b}_{2}=7-2=5 \end{aligned}$ |
| :---: | :---: | :---: |

|  | will be $36-0,5=$ <br> 35,5 (b) <br> - p (long of class) $=3$ <br> - F ( number before middle of frequency $)=$ $3+4+1+2+1=11$ <br> - f (middle of frequency) = 7 $\begin{aligned} & =35,5+3 \cdot \frac{17,5-11}{7} \\ & =35,5+3 \cdot 0,786 \\ & =35,5+2,36=\mathbf{3 7 , 8} \end{aligned}$ | $\begin{aligned} & =35,5+3 \cdot(6 / 11) \\ = & 35,5+3(0,545) \\ = & 35,5+1,64 \\ = & \mathbf{3 7 , 1 4} \end{aligned}$ |
| :---: | :---: | :---: |

## 4. Determine Deviation Standard

$$
\begin{aligned}
& \mathbf{S D y}_{1}=\sqrt{\frac{\sum \mathbf{f} \cdot \mathbf{X}^{\mathbf{N}}}{\mathrm{N}}-\left[\frac{\sum \mathbf{f} \cdot \mathbf{X}}{\mathrm{N}}\right]^{2}} \\
& \mathbf{S D \mathbf { y } _ { 1 }}=\sqrt{\frac{56366}{35}-\left[\frac{1358}{35}\right] \mathbf{2}} \\
& \mathbf{S D y}_{1}=\sqrt{1610,46-1505,44}=\sqrt{105,02}=\mathbf{1 0 , 2 4 7}
\end{aligned}
$$

## 5. Determine Error Standard;

$$
\mathrm{SE}_{\mathrm{y} 1}=\frac{\mathrm{SD}_{\mathrm{y} 1}}{\sqrt{\mathrm{~N}-1}}=\frac{10,247}{\sqrt{34}}=\mathbf{1 , 7 5}
$$

## b. The Calculation of Control Class from Post-test Score as Y

 variable.Table 3
Score of Post- test from Control Class as Y Variable.

| No | Respondents | Score |
| :---: | :---: | :---: |
|  |  | Post-test |
| 1 | AND | 69 |
| 2 | ASY | 54 |
| 3 | ALD | 60 |
| 4 | ALF | 75 |
| 5 | BBG | 76 |
| 6 | DHY | 56 |

| 31 | UH | 65 |
| 32 | UTO | 60 |
| 33 | WH | 44 |
| 34 | YTI | 65 |
| 35 | YSI | 74 |

## 1. Determine Interval Class

| Determine Range: |
| :--- | :--- |
| $\mathrm{R}=\mathrm{H}-\mathrm{L}+1$ |
| $=83-44+1=$ |$\quad$| Determine interval class $(\mathrm{k})$ |
| :--- |
| 40 |$\quad \underline{\text { between } 10-20 .}$| i $\quad \mathrm{i}$ |
| :--- |

It got $\mathrm{i}=2$ because $40: 2=20$ (between $10-20$ ). As the result, frequency of distribution from post-test of control class as follow:

## 2. Make Frequency of Distribution Score

Table 4
The Frequency of Distribution Score from Post-test of Control Class

| Interval | $(\mathrm{f})$ | $(\mathrm{Y})$ | $\mathrm{y}^{\prime}$ | fy' | fy' $^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $44-47$ | 3 | 45,5 | -4 | -12 | 48 |
| $48-51$ | 3 | 49,5 | -3 | -9 | 27 |
| $52-55$ | 4 | 53,5 | -2 | -8 | 16 |
| $56-59$ | 4 | 57,5 | -1 | -4 | 4 |
| $60-63$ | 5 | 61,5 | 0 | 0 | 0 |
| $64-67$ | 3 | 65,5 | +1 | 3 | 3 |
| $68-71$ | 4 | 69,5 | +2 | 8 | 16 |
| $72-75$ | 3 | 73,5 | +3 | 9 | 27 |
| $76-79$ | 5 | 77,5 | +4 | 20 | 80 |
| $80-83$ | 1 | 81,5 | +5 | 5 | 25 |
| $\sum$ | $\mathbf{N}=\mathbf{3 5}$ |  |  | $\sum \mathbf{f y}{ }^{\prime}=\mathbf{1 2}$ | $\sum$ fy $^{{ }^{2}=246}$ |

## 3. Determine Mean, Median, and Modus Score

| Determine average of data (Mx2) $\begin{aligned} \mathbf{M y 2} & =\frac{\sum \mathrm{f} . \mathrm{X}}{\mathrm{~N}} \\ & =\frac{2200,5}{35} \\ & =\mathbf{6 2 , 8 7} \end{aligned}$ | Determine midpoint of data (Mdn). $\begin{aligned} & \text { Mdn2 }=\mathrm{b}+\mathrm{p} \cdot \frac{0,5 \cdot \mathrm{~N}-\mathrm{F}}{\mathrm{f}} \\ & \begin{array}{l} \bullet \mathrm{b}=35 / 2 \\ \quad=17,5 \text { (it lies at } 60- \\ 63), \text { so it will be } 60-0,5 \\ =59,5 \text { (b) } \end{array} \end{aligned}$ <br> - $\mathrm{p}($ long of class $)=4$ <br> - F ( number before middle of frequency) $=3+3+4+$ $4=14$ <br> - $\mathrm{f}($ middle of frequency $)=5$ | Determine the most frequently appear (Mo) $\begin{aligned} & \mathbf{M o 2}=\mathrm{b}+\mathrm{p} \cdot \frac{\mathrm{~b}_{1}}{\mathrm{~b}_{1}+\mathrm{b}_{2}} \\ & \mathrm{~b}_{1}=5-4=1 \\ & \mathrm{~b}_{2}=5-3=2 \\ &=59,5+4 \cdot(1 / 3) \\ &=35,5+4(0,33) \\ &=59,5+1,33 \\ &=\mathbf{6 0 , 8} \end{aligned}$ |
| :---: | :---: | :---: |

|  | $=49,5+4 \cdot \frac{17,5-14}{5}$ |  |
| :--- | :--- | :--- |
|  | $=59,5+4 \cdot 0,7$ |  |
|  | $=59,5+2,8=\mathbf{6 2 , 3}$ |  |

## 4. Determine Deviation Standard;

$$
\begin{aligned}
& \text { SDy2 }=I \sqrt{\frac{\sum \mathbf{f} \cdot \mathbf{y}^{2}}{\mathrm{~N}}-\left[\frac{\sum \mathbf{f} \cdot \mathbf{y}}{\mathrm{N}}\right] \mathbf{2}} \\
& \mathbf{S D y} 2=4 \sqrt{\frac{246}{35}-\left[\frac{12}{35}\right] \mathbf{2}} \\
& \mathbf{S D}_{\mathbf{y} 2}=\sqrt[4]{7,028-0,116}=4 \times \sqrt{6,912}=\mathbf{1 0 , 5 2}
\end{aligned}
$$

5. Determine error standard;

$$
\mathrm{SE}_{\mathrm{y} 2}=\frac{\mathrm{SD}_{\mathrm{y} 2}}{\sqrt{\mathrm{~N}-1}}=\frac{10,52}{\sqrt{34}}=\mathbf{1 , 8}
$$

## 6. Make the polygon graphic

| 34 | SP | 81 |
| 35 | SRT | 66 |

## 1. Determine Interval Class

Determine Range:
Determine interval class ( k )

$$
\begin{array}{rl|l}
\mathrm{R} & =\mathrm{H}-\mathrm{L}+1 \\
& =98-51+1=48 & \begin{array}{l}
\mathrm{R}=\underline{48}=\text { it is had better getting result } \\
\text { between } 10-20 . \\
\mathrm{i} \quad \mathrm{i}
\end{array}
\end{array}
$$

It got $\mathrm{i}=4$ because $48: 4=12$ (between $10-20$ ). As the result, frequency of distribution from pre-test of control class as follow,

## 2. Make Frequency of Distribution Score

Table 8
The Frequency Distribution Score of Post-test from Experimental Class

| Interval | (f) | $(\mathrm{X})$ | $\mathrm{X}^{\prime}$ | fx | $\mathrm{f.x}^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $51-54$ | 1 | 52,5 | -7 | -7 | 49 |
| $55-58$ | 0 | 56,5 | -6 | 0 | 0 |
| $59-62$ | 0 | 60,5 | -5 | 0 | 0 |
| $63-66$ | 5 | 64,5 | -4 | -20 | 80 |
| $67-70$ | 3 | 68,5 | -3 | -9 | 27 |
| $71-74$ | 1 | 72,5 | -2 | -2 | 4 |
| $75-78$ | 4 | 76,5 | -1 | -4 | 4 |
| $79-82$ | 4 | 80,5 | 0 | 0 | 0 |
| $83-86$ | 7 | 84,5 | 1 | 7 | 7 |
| $87-90$ | 8 | 88,5 | 2 | 16 | 32 |

| $91-94$ | 1 | 92,5 | 3 | 3 | 9 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $95-98$ | 1 | 96,5 | 4 | 4 | 16 |
| $\sum$ | $\mathbf{N}=\mathbf{3 5}$ |  |  | $\sum \mathrm{f} . \mathrm{x}=-12$ | $\sum \mathrm{f} . \mathrm{x}^{2}=228$ |

## 3. Determine Mean, Median, and Modus

| Determine average score of data (Mx1) $\begin{aligned} \mathbf{M x 2} & =\frac{\sum \mathrm{f} . \mathrm{X}}{\mathrm{~N}} \\ & =\frac{2769,5}{35} \\ & =\mathbf{7 9 , 1 2} \end{aligned}$ | $\begin{aligned} & \text { Determine midpoint of data (Mdn) } \\ & \text { Mdn }=\mathrm{b}+\mathrm{p} \cdot \frac{0,5 \cdot \mathrm{~N}-\mathrm{F}}{\mathrm{f}} \\ & \bullet \mathrm{~b}=35 / 2 \\ & \quad=17,5 \text { (it lies at } 79-82 \text { ), so it } \\ & \quad \text { will be } 79-0,5=78,5(\mathrm{~b}) \\ & \text { - } \mathrm{p} \text { (long of class) }=4 \\ & \text { - F ( number before middle of } \\ & \text { frequency) }=1+5+3+1+4=14 \\ & \text { - } \mathrm{f} \text { (middle of frequency) }=4 \\ & =78,5+4 \cdot \frac{17,5-14}{4} \\ & =78,5+4 \cdot 0,875 \\ & =78,5+3,5=\mathbf{8 2} \end{aligned}$ | Determine the most frequently appear (Mo) $\begin{aligned} \mathbf{M o} & =\mathrm{b}+\mathrm{p} \cdot \frac{\mathrm{~b}_{1}}{\mathrm{~b}_{1}+\mathrm{b}_{2}} \\ \mathrm{~b}_{1} & =4-4=0 \\ \mathrm{~b}_{2} & =4-7=-3 \\ & =78,5+4 \cdot(0 /-3) \\ & =78,5+4(0) \\ & =78,5 \end{aligned}$ |
| :---: | :---: | :---: |

## 4. Determine Deviation Standard

$$
\begin{aligned}
& \mathbf{S D x}_{2}=\sqrt[I]{\frac{\sum \mathbf{f} \cdot \mathbf{x}^{2}}{\mathrm{~N}}-\left[\frac{\sum \mathbf{f} \cdot \mathbf{x}}{\mathrm{N}}\right]} \mathbf{2} \\
& \mathbf{S D}_{\mathbf{x} 2}=\sqrt[4]{\frac{228}{35}-\left[\frac{12}{35}\right] \mathbf{2}} \\
& \mathbf{S D}_{\mathbf{x} 2}=\sqrt[4]{6,398-0,116}=4 \times \sqrt{6,398}=\mathbf{1 0 , 1 2}
\end{aligned}
$$

## 5. Determine error standard

$$
\mathrm{SE}_{\mathrm{x} 2}=\frac{\mathrm{SD}_{\mathrm{x} 2}}{\sqrt{\mathrm{~N}-1}}=\frac{10,118}{\sqrt{34}}=\mathbf{1 , 7 3}
$$

## 6. Make the Polygon Graphic

Graphic 2.1
The Polygon Graphic of Pre-test from Experimental Class

Graphic 2.2
The Polygon Graphic of Pre-test from Control Class

## 7. Determine Average Score for Control Class and

## Experimental Class

For control class is
$\mathrm{MY}=\mathrm{My} 2-\mathrm{My} 1=62,87-38,5=24,37$
For experimental class is
$\mathrm{MX}=\mathrm{Mx} 2-\mathrm{Mx} 1=79,12-42,8=36,32$

## 8. Determine Percentage both $X$ variable and $Y$ variable

After making the polygon graphic, then, the writer determines how big percentage from Y variable:

$$
\%=\frac{\mathrm{MY}}{\mathrm{MY}+\mathrm{MX}} \quad \times 100 \%
$$

24,37

$$
\begin{aligned}
& =24,37+36,32 \times 100 \% \\
& =\mathbf{4 0 , 1 5 \%}
\end{aligned}
$$

Based on the result of the calculation, it can be seen that the percentage from control class got increasing into $\mathbf{4 0 , 1 5 \%}$

Furthermore, the writer determines how big percentage of the average score increase from X variable by formula :

$$
\begin{aligned}
\% & =\frac{M X}{M Y+M X} \times 100 \% \\
& =\frac{36,32}{24,37+36,32} \times 100 \%
\end{aligned}
$$

$$
=59,85 \%
$$

So, the percentage from experimental class got increasing $\mathbf{5 9 , 8 5} \%$. It got higher percentage than control class.
9. Determine Difference of error Standard from X Variable and Y Variable
$\mathrm{SE}_{\mathrm{Mx}}-\mathrm{SE}_{\mathrm{My}}=\sqrt{\mathrm{SE}_{\mathrm{x}}{ }^{2}+\mathrm{SE}_{\mathrm{y}}{ }^{2}}=\sqrt{(1,73)^{2}+(1,80)^{2}}=\sqrt{6,24}$
10. Determine $\mathbf{t}_{\mathbf{o}}(\mathbf{t}$ observation)
$\mathbf{t}_{\mathbf{o}}=\frac{\mathrm{M}_{\mathrm{X}}-\mathrm{M}_{\mathrm{Y}}}{\mathrm{SE}_{\mathrm{Mx}}-\mathrm{SE}_{\mathrm{My}}}=\frac{36,32-24,37}{2,49}=\frac{11,95}{2,49}=\mathbf{4 , 7 9} \mathbf{( 5 )}$

Giving interpretation to " $\mathrm{t}_{0}$ "
df or $\mathrm{db}=(\mathrm{N} 1+\mathrm{N} 2-2)=35+35-2=68$ ( consult to " t " table score ). Based on t table that there is not df containing 68, so the writer uses the nearest df 70 . With df as number 70 is got t table as follow;

- At significance level 5\%: $\mathrm{t}_{\mathrm{t}}=1,66$
- At significance level $1 \%: t_{t}=2,38$

Because " t " that the writer got from the calculation is higher than t table both at significance level $5 \%$ and $1 \%$, so the hypothesis alternative (Ho) is accepted. It means that both X variable and Y variable has significant difference.

## B. Hypothesis Testing

To prove the writer's hypothesis which is submitted before, the data obtained from experimental and control class are formulated by assumption as follow:

| If $\mathrm{t}_{0}>\mathrm{t}_{\mathrm{t}}$ | Alternative hypothesis is accepted. It means that there is <br> $4,79>$ |
| :---: | :--- |
| 2,38 | significant difference of teaching vocabulary between <br> teaching prefixes and suffixes through index card games and <br> teaching prefixes and suffixes without using index card <br> games. |
| If $\mathrm{t}_{0}<\mathrm{t}_{\mathrm{t}}$ | Null hypothesis is rejected. It means that there is no <br> 4,79 |
| significant difference of teaching vocabulary between |  |
| teaching prefixes and suffixes using index card games and |  |
| without using index card games |  |

From the result calculation above, it is obtained that the value of $t_{o}$ ( t observation) is 4.79 , degree freedom ( df ) is 68 . In degree significance $5 \%$ from $68(\mathrm{t}$ table $)=1,66$, in degree of significance $1 \%$ from $68(\mathrm{t}$ table $)=2,38$

After that the data, the writer compared it with $t_{t}(\mathrm{t}$ table) both in degree significance $5 \%$ and $1 \%$. Therefore, $t_{o:} t_{t}=4,79>1,66$, in degree of significance $5 \%$ and $t_{o}: t_{t}=4,79>2,38$ in degree of significance $1 \%$.

The statistic hypothesis states if $t_{o}$ is higher than $t_{t}$, it shows that $H_{a}$ (alternative hypothesis) of research is accepted and $H_{o}$ (null hypothesis) is rejected. It means that there is significant influence of teaching prefixes and suffixes using index card games toward student's vocabulary mastery and without using index card games.

## C. Interpretation of Data

From the calculation of the data, the writer got the result as follow:

From control class: (1) Mean score of pre-test (My1) 38,5 and post-test score (My2) 62,87. It means that average score of control class got increase 24,37 . Whereas mean score from experimental class for pretest (Mx1) 42,8 and post-test score (Mx2) 79,12. It means that average score from experimental class got increase 36,32 and it got higher increase than from control class. (2) The percentage from control class is $40,15 \%$ and experimental class is $59,85 \%$, so both average and percentage score both of control class and experimental class got increase but control class got relatively little increase than experimental class. (3) ' $t$ ' observation is 4,79 and df 68 .

Based on the data obtained from control class and experimental class among the average score, percentage, and tobservation, the writer summarize that teaching prefixes and suffixes using index card games has significant influence toward student vocabulary.
