# CHAPTER IV <br> THE RESULT OF THE RESEARCH 

## A. Description of the Data

As it has been mentioned in the previous chapter, the sample was taken from 1 class of TKJ (Tekhnik Komputer Jaringan) on second grade of SMK Bismillah Padarincang. The class consists of 30 students that was analyzed their scored in order to know whether there is any correlation between students motivation in learning reading and their achievement.

In this chapter, it will be discussed and explained about the score of students motivation and the result of reading achievement which has been collected. To find out whether there is significance correlation between students motivation in learning reading and their achievement. The whole data is as follow:

## 1. Measure of Variable $X$

The result of variable X (opinion about the Student's
Motivation)

51515353545454545454

55555656565656565657
$575758585959606161 \quad 62$

To know the student's motivation, the writer gives the
questionnaire as much as 15 items. Below are the data of the questionnaire:

Table 4.1
The Students' Motivation (Variable X)

| No. | Respondens | ITEM |  |  |  |  |  |  |  |  |  |  |  |  |  |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Aan Andriyani | 4 | 5 | 4 | 3 | 5 | 4 | 4 | 3 | 5 | 4 | 4 | 5 | 5 | 5 | 2 | 62 |
| 2 | Aan Darwati | 5 | 3 | 4 | 3 | 5 | 4 | 4 | 3 | 5 | 5 | 4 | 3 | 3 | 5 | 5 | 61 |
| 3 | Abdul Haris | 5 | 3 | 3 | 4 | 3 | 4 | 4 | 3 | 4 | 4 | 4 | 3 | 5 | 4 | 4 | 57 |
| 4 | Ahmad Sunhaji | 5 | 3 | 4 | 3 | 5 | 4 | 4 | 5 | 2 | 4 | 4 | 3 | 4 | 4 | 5 | 59 |
| 5 | Ahmad Fuazi | 5 | 5 | 5 | 3 | 5 | 4 | 4 | 3 | 5 | 4 | 4 | 3 | 3 | 4 | 4 | 61 |
| 6 | Aldini Hadisusanti | 5 | 3 | 4 | 3 | 5 | 4 | 4 | 3 | 5 | 5 | 3 | 3 | 3 | 5 | 5 | 59 |
| 7 | Badrudin | 4 | 3 | 4 | 3 | 5 | 5 | 4 | 3 | 2 | 5 | 4 | 4 | 2 | 5 | 5 | 57 |
| 8 | Eva Fahriah | 3 | 3 | 3 | 3 | 5 | 4 | 4 | 2 | 2 | 5 | 5 | 3 | 5 | 5 | 2 | 54 |
| 9 | Haerudin | 3 | 3 | 5 | 3 | 2 | 5 | 3 | 2 | 2 | 4 | 4 | 5 | 3 | 5 | 5 | 54 |
| 10 | Hamdan Taufiq | 5 | 2 | 5 | 3 | 5 | 3 | 3 | 5 | 5 | 4 | 3 | 3 | 3 | 2 | 2 | 53 |
| 11 | Hamdiah | 4 | 4 | 4 | 3 | 1 | 3 | 3 | 4 | 1 | 3 | 5 | 3 | 3 | 5 | 5 | 51 |
| 12 | Iim Sobri | 5 | 3 | 4 | 3 | 4 | 4 | 4 | 3 | 5 | 5 | 4 | 4 | 5 | 2 | 5 | 56 |
| 13 | Izah Fauziah | 3 | 3 | 4 | 3 | 5 | 4 | 3 | 3 | 5 | 3 | 4 | 5 | 4 | 4 | 4 | 54 |
| 14 | Lina Helina | 3 | 5 | 5 | 3 | 5 | 3 | 5 | 3 | 2 | 4 | 3 | 3 | 5 | 2 | 1 | 51 |

| 29 | TB. Lilik Abd. Malik | 4 | 4 | 5 | 5 | 4 | 5 | 2 | 3 | 3 | 2 | 5 | 3 | 4 | 3 | 4 | 56 |
| 30 | Yani Fitriyani | 4 | 3 | 4 | 3 | 5 | 2 | 3 | 3 | 2 | 5 | 4 | 5 | 5 | 4 | 4 | 56 |
|  | $\Sigma$ |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1685 |

a. To look for the range by using formula

$$
\begin{aligned}
\mathrm{R} & =\mathrm{H}-\mathrm{L}+\mathrm{I} \\
& =62-51+1 \\
& =12
\end{aligned}
$$

b. To look for the number of class interval by using formula

$$
\begin{aligned}
\mathrm{K} & =\mathrm{I}+3,3 \log 30 \\
& =\mathrm{I}+3,3(1,477) \\
& =\mathrm{I}+4,8741 \\
& =5,8741 \\
& =6
\end{aligned}
$$

c. To look for the length of class interval by using formula

$$
\begin{aligned}
I & =\frac{R}{K} \\
& =\frac{12}{6}=2
\end{aligned}
$$

## Table 4.2

Distribution of frequently for variable $X$

| Class Interval | F | Xi | fxi | fk |
| :---: | :---: | :---: | :---: | :---: |
| $51-52$ | 2 | 51.5 | 103 | 2 |
| $53-54$ | 8 | 53.5 | 428 | 10 |
| $55-56$ | 9 | 55.5 | 499.5 | 19 |
| $57-58$ | 5 | 57.5 | 287.5 | 24 |
| $59-60$ | 3 | 59.5 | 178.5 | 26 |
| $61-62$ | 3 | 61.5 | 184.5 | 30 |
| $\Sigma$ | $\mathbf{3 0}$ |  | $\mathbf{1 6 8 1}$ |  |

Characteristic of the distribution curve.

d. Central Tendency

1. Mean

$$
\overline{\mathrm{x}}=\frac{\Sigma \mathrm{fxi}}{\mathrm{~N}}
$$

$$
\begin{aligned}
& =\frac{1681}{30} \\
& =56,03
\end{aligned}
$$

2. Median

$$
\begin{aligned}
\mathrm{Md} & =\mathrm{Bb}+\mathrm{i}\left(\frac{\frac{1}{2} \mathrm{~N}-\mathrm{fkb}}{\mathrm{fi}}\right) \\
& =54,5+2\left(\frac{15-10}{9}\right) \\
& =54,5+1,1 \\
& =55,6
\end{aligned}
$$

3. Mode

$$
\begin{aligned}
\text { Mo } & =3 \mathrm{Md}-2 \overline{\mathrm{x}} \\
& =3(55,6)-2(56,03) \\
& =166,8-112,06 \\
& =54,74
\end{aligned}
$$

e. Test of Distribution Normality

Table 4.3
Distribution Normality Variable $\mathbf{X}$

| Class Interval | f | Xi | $\mathrm{X}^{2}$ | fxi | $\mathrm{fx}^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $51-52$ | 2 | 51,5 | 2652,25 | 103 | 5304,5 |
| $53-54$ | 8 | 53,5 | 2862,25 | 428 | 22898 |
| $55-56$ | 9 | 55,5 | 3080,25 | 499,5 | 27722,3 |
| $57-58$ | 5 | 57,5 | 3306,25 | 287,5 | 16531,3 |
| $59-60$ | 3 | 59,5 | 3540,25 | 178,5 | 10620,8 |
| $61-62$ | 3 | 61,5 | 3782,25 | 184,5 | 11346,8 |
| $\Sigma$ | $\mathbf{3 0}$ |  |  | $\mathbf{1 6 8 1}$ | $\mathbf{9 4 4 2 3 , 5}$ |

f. Standard Deviation, by using formula

$$
\begin{aligned}
\mathrm{SD} & =\sqrt{\frac{\Sigma f x^{2}}{N}-\left(\frac{\Sigma f x}{N}\right)} \\
& =\sqrt{\frac{94423,5}{30}-\left(\frac{1681}{30}\right)} \\
& =\sqrt{3147,45-56,03} \\
& =\sqrt{3091,42} \\
& =1,76
\end{aligned}
$$

g. To arrange the table for distribution of observation and expectation frequently.

Table 4.4
The Distribution of Observation Frequently

| Class Interval | Xi | Z Score | Z Table | L |
| :---: | :---: | :---: | :---: | :---: |
|  | 50,5 | $-3,14$ | 0,4992 |  |
| $51-52$ | 52,5 | $-2,00$ | 0,4772 | $-0,022$ |
| $53-54$ | 54,5 | 0,86 | 0,3051 | $-0,1721$ |
| $55-56$ | 56,5 | 0,27 | 0,1064 | $-0,1987$ |
| $57-58$ | 58,5 | 1,40 | 0,4192 | 0,3128 |
| $59-60$ | 60,5 | 2,53 | 0,4943 | 0,0751 |
| $61-62$ | 62,5 | 3,67 | 0,4999 | 0,0056 |

Table 4.5
Tables of calculation form the tables above

| Oi | Ei | $\mathrm{Oi}-\mathrm{Ei}$ | $(\mathrm{Oi}-\mathrm{Ei})^{2}$ | $\frac{(\mathrm{Oi}-\mathrm{Ei})^{2}}{\mathrm{Ei}}$ |
| :---: | :---: | :---: | :---: | :---: |
| 2 | $-0,66$ | 2,66 | 7,0 | $-10,6$ |
| 8 | $-5,16$ | 13,2 | 174,2 | $-33,8$ |
| 9 | $-5,96$ | 14,9 | 222 | $-37,2$ |
| 5 | 9,38 | $-4,38$ | $-19,18$ | $-2,0$ |
| 3 | 2,25 | 0,75 | 0,56 | 0,2 |
| 3 | 0,17 | 2,83 | 8,0 | 47,1 |

h. To look for the score chisquare $\left(\mathrm{X}_{2}\right)$ by using formula

$$
\begin{aligned}
X^{2} & =\Sigma \frac{(\mathrm{Oi}-\mathrm{Ei})^{2}}{\mathrm{Ei}} \\
& =\sum(-10,6+-33,8+-37,2+-2,0+0,2+47,1) \\
& =-36,3
\end{aligned}
$$

i. To Determine the degree of freedom (df) by using formula

$$
\begin{aligned}
\mathrm{df} \quad & =\mathrm{k}-3 \\
& =6-3 \\
& =3
\end{aligned}
$$

j. Determine $X^{2}$ table

$$
\begin{aligned}
\mathrm{X}^{2} \text { table } & =(0,95)(3) \Rightarrow(3=7,81) \\
& =2,85
\end{aligned}
$$

Conclusion, because $X_{2}$ score $\{-36,3\}<X^{2}$ table $\{7,81\}$ the sample is normal.

## 2. Measure of Variable $Y$

The result of variable Y (Achievement in Reading)

| 5 | 5 | 5 | 6 | 6 | 6 | 6 | 6 | 6 | 7 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 |
| 7 | 8 | 8 | 8 | 8 | 8 | 8 | 8 | 9 | 9 |

In order to easy measure of the score, the writer arrange the data qualification by making the following table:

Table 4.6
The Students' Achievement in Reading (Variable Y)

| No. | Respondens | Score |
| :---: | :--- | :---: |
| 1 | Aan Andriyani | 9 |
| 2 | Aan Darwati | 9 |
| 3 | Abdul Haris | 8 |
| 4 | Ahmad Sunhaji | 7 |
| 5 | Ahmad Fuazi | 8 |
| 6 | Aldini Hadisusanti | 8 |
| 7 | Badrudin | 7 |
| 8 | Eva Fahriah | 7 |
| 9 | Haerudin | 5 |
| 10 | Hamdan Taufiq | 6 |
| 11 | Hamdiah | 5 |
| 12 | lim Sobri | 7 |
| 13 | Izah Fauziah | 8 |
| 14 | Lina Helina | 7 |
| 15 | Lusi Susilawati | 7 |
| 16 | Mahdi Safrudin | 7 |
| 17 | Melita Cipta P. | 6 |
| 18 | Muarifatusolihah | 6 |
| 19 | Muhaemin | 5 |
| 20 | Nasimah | 6 |
| 21 | Nurlena | 7 |
| 22 | Nurma Amelia | 7 |
| 23 | St. Khumaedaah | 6 |
| 24 | St. Rohaniah | 6 |
| 25 | Suherman | 7 |
| 26 | Supyadi | 8 |
| 27 | Tati | 8 |
| 28 | Tating Komalasari | 7 |
| 29 | TB. Lilik Abd. Malik | 8 |
| 30 | Yani Fitriyani | 7 |
|  |  | 7 |
|  |  | 7 |
|  |  | 7 |

a. To look for the range by using formula

$$
\begin{aligned}
\mathrm{R} & =\mathrm{H}-\mathrm{L}+1 \\
& =9-5+1 \\
& =5
\end{aligned}
$$

b. To look for the number of class interval by using formula

$$
\begin{aligned}
\mathrm{K} & =\mathrm{I}+3,3 \log 30 \\
& =\mathrm{I}+3,3(1,477) \\
& =1+4,8741 \\
& =5,8741 \\
& =6
\end{aligned}
$$

c. To look for the length of class interval by using formula

$$
\begin{aligned}
\mathrm{I} & =\frac{\mathrm{R}}{\mathrm{~K}} \\
& =\frac{5}{6}=0,8
\end{aligned}
$$

## Table 4.7

Distribution of frequently for variable $Y$

| Class Interval | f | fxi | fk |
| :---: | :---: | :---: | :---: |
| 5 | 3 | 15 | 3 |
| 6 | 6 | 36 | 9 |
| 7 | 12 | 84 | 21 |
| 8 | 7 | 56 | 28 |
| 9 | 2 | 18 | 30 |
| $\Sigma$ | $\mathbf{3 0}$ | $\mathbf{2 0 9}$ |  |

## d. Central Tendency

1. Mean

$$
\begin{aligned}
\overline{\mathrm{x}} \quad & =\frac{\Sigma \mathrm{fyi}}{\mathrm{~N}} \\
& =\frac{209}{30} \\
& =6,96
\end{aligned}
$$

## 2. Median

$$
\begin{aligned}
\mathrm{Md} & =\mathrm{Bb}+\mathrm{i}\left(\frac{\frac{1}{2} \mathrm{~N}-\mathrm{fkb}}{\mathrm{fi}}\right) \\
& =6,5+2\left(\frac{15-9}{12}\right) \\
& =6,5+1 \\
& =7,5
\end{aligned}
$$

3. Mode

$$
\begin{aligned}
\text { Mo } & =3 \mathrm{Md}-2 \mathrm{y} \\
& =3(7,5)-2(6,96) \\
& =22,5-13,92 \\
& =8,58
\end{aligned}
$$

Characteristic of the distribution curve.

e. Test of Distribution Normality

Table 4.8
The Distribution of Observation and Expectation

## Frequently

| Class Interval | f | yi | $\mathrm{y}^{2}$ | fy | fy $^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 5 | 3 | 5 | 25 | 15 | 75 |
| 6 | 6 | 6 | 36 | 36 | 216 |
| 7 | 12 | 7 | 49 | 84 | 588 |
| 8 | 7 | 8 | 64 | 56 | 448 |
| 9 | 2 | 9 | 81 | 18 | 162 |
| $\sum$ | $\mathbf{3 0}$ | $\sum$ | $\mathbf{2 5 5}$ | $\mathbf{2 0 9}$ | $\mathbf{1 4 8 9}$ |

f. Standard Deviation, by using formula

$$
\mathrm{SD}=\sqrt{\frac{\Sigma f y^{2}}{N}-\left(\frac{\Sigma f y}{N}\right)}
$$

$$
\begin{aligned}
& =\sqrt{\frac{1489}{30}-\left(\frac{209}{30}\right)} \\
& =\sqrt{49,63-6,96} \\
& =\sqrt{42,67} \\
& =6,53
\end{aligned}
$$

g. To arrange the table for distribution of observation and expectation frequently.

Table 4.9
Table for Distribution and Expectation Frequently

| Class Interval | Xi | Z Score | Z Table | L |
| :---: | :---: | :---: | :---: | :---: |
|  | 4,5 | $-0,38$ | 0,1480 |  |
| 5 | 5,5 | $-0,22$ | 0,0871 | $-0,0609$ |
| 6 | 6,5 | $-0,07$ | 0,0279 | $-0,0592$ |
| 7 | 7,5 | 0,08 | 0,0310 | $-0,0031$ |
| 8 | 8,5 | 0,24 | 0,0948 | 0,0638 |
| 9 | 9,5 | 0,39 | 0,1517 | 0,0569 |

Table 4.10
Tables of calculation form the tables above

| Oi | Ei | $\mathrm{Oi}-\mathrm{Ei}$ | $(\mathrm{Oi}-\mathrm{Ei})^{2}$ | $\frac{(0 i-E)^{2}}{E}$ |
| :---: | :---: | :---: | :---: | :---: |
| 3 | $-1,83$ | 4,83 | 23,3 | $-12,7$ |
| 6 | $-1,78$ | 7,78 | 60,5 | $-33,9$ |
| 12 | $-0,09$ | 12,1 | 146,4 | $-1,63$ |
| 7 | 1,91 | 5,09 | 25,9 | 13,56 |
| 2 | 1,70 | 0,3 | 0,09 | 0,05 |

h. To look for the score chi square $\left(\mathrm{X}_{2}\right)$ by using formula

$$
\begin{aligned}
\mathrm{X}^{2} & =\Sigma \frac{(\mathrm{Oi}-\mathrm{Ei})^{2}}{\mathrm{Ei}} \\
& =\sum(-12,7+-33,9+-1,63+13,56+0,05) \\
& =-34,64
\end{aligned}
$$

i. To arrange/determine the degree of freedom (df) by using formula

$$
\begin{aligned}
\mathrm{df} \quad & =\mathrm{k}-3 \\
& =5-3 \\
& =2
\end{aligned}
$$

j. Determine $x^{2}$ table

$$
\begin{aligned}
\mathrm{Y}^{2} \text { table } & =(0,95)(2) \\
& =1,9
\end{aligned}
$$

Conclusion, because $X^{2}$ score $(-34,64)<X^{2}$ table $(5,99)$ the sample is normal.

Table 4.11

The Data Variable $X$ and $Y$

| No | X | Y | X 2 | Y 2 | XY |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 62 | 9 | 3844 | 81 | 558 |
| 2 | 61 | 9 | 3721 | 81 | 549 |
| 3 | 57 | 8 | 3249 | 64 | 456 |
| 4 | 59 | 7 | 3481 | 49 | 413 |
| 5 | 61 | 8 | 3721 | 64 | 488 |
| 6 | 59 | 8 | 3481 | 64 | 472 |
| 7 | 57 | 7 | 3249 | 49 | 399 |
| 8 | 54 | 7 | 2916 | 49 | 378 |
| 9 | 54 | 5 | 2916 | 25 | 270 |
| 10 | 53 | 6 | 2809 | 36 | 318 |
| 11 | 51 | 5 | 2601 | 25 | 255 |
| 12 | 56 | 7 | 3136 | 49 | 392 |
| 13 | 54 | 8 | 2916 | 64 | 432 |
| 14 | 51 | 7 | 2601 | 49 | 357 |
| 15 | 55 | 7 | 3025 | 49 | 385 |

| 27 | 56 | 8 | 3136 | 64 | 448 |
| 28 | 57 | 7 | 3249 | 49 | 399 |
| 29 | 56 | 8 | 3136 | 64 | 448 |
| 30 | 56 | 7 | 3136 | 49 | 392 |
|  | $\mathbf{1 6 8 5}$ | $\mathbf{2 0 9}$ | $\mathbf{9 4 8 6 1}$ | $\mathbf{1 4 9 9}$ | $\mathbf{1 1 8 0 0}$ |

## B. The Data Analysis

After the calculation of whole the data from variable (x), and variable (y), the next step is to statistical data analysis in order to insert the information from the Table into the raw score formula (Product Moment) to find the correlation index, as follows:

1. Testing the influence of variable X and variable Y , by using product moment formula

$$
\begin{aligned}
\mathrm{r}_{\mathrm{xy}} & =\frac{N \Sigma X Y-(\Sigma X)(\Sigma Y)}{\sqrt{\left.\left\{N \Sigma X^{2}-(\Sigma X)^{2}\right\} N \Sigma Y^{2}-(\Sigma Y)^{2}\right\}}} \\
& =\frac{30(11800)-(1685)(209)}{\sqrt{\left(30(94861)-(1685)^{2}\right)\left(30(1499)-(209)^{2}\right)}} \\
& =\frac{354000-352165}{\sqrt{(2845830-2839225)(44970-43681)}} \\
& =\frac{1835}{\sqrt{(6605)(1289)}} \\
& =\frac{1835}{2917,85} \\
& =0,63
\end{aligned}
$$

## C. Coefficient of Correlation

To look for correlation between students' motivations and their achievement in reading is used the technique of product correlation as follow:

1. Test significance of coefficient correlation

$$
\begin{aligned}
\mathrm{t} & =\frac{\mathrm{r} \sqrt{\mathrm{n}-2}}{\sqrt{1-r^{2}}} \\
& =\frac{0,63 \sqrt{30-2}}{\sqrt{1-0,63^{2}}} \\
& =\frac{3,333}{\sqrt{0,603}} \\
& =\frac{3,333}{0,776} \\
& =4,295
\end{aligned}
$$

2. Determine $t$ score by using test of significant

$$
\begin{aligned}
\mathrm{df} \quad & =\mathrm{N}-2(\mathrm{Nr}) \\
& =30-2 \\
& =28
\end{aligned}
$$

3. Determine table
t table $=(0,95)(28)$

$$
=26,6
$$

4. Coefficient determinacy variable X and variable Y

$$
\begin{aligned}
\mathrm{CD} & =r^{2} \times 100 \% \\
& =(063)^{2} \times 100 \% \\
& =0,3969 \times 100 \% \\
& =39,69 \%
\end{aligned}
$$

## D. Hypothesis Testing

In this section, the writer test $\mathrm{H}_{0}$ which is saying that there is no correlation between students' motivation in learning reading and their achievement. and the alternative hypothesis (Hi) says that there is correlation between students' motivation in learning reading and their achievement.

To test hypothesis, the writer uses product moment correlation technique with the criterion.

Ho : It is accepted of " r " observed is less then " r " table
$\mathrm{Hi} \quad$ : It is accepted if " r " observed is greater then " r " table
Form of the calculation abase, The writer gets the correlation coefficient of both variables is " r " table in which $\mathrm{df}=\mathrm{N}-2=30-$
$2=28$ in significance level $5 \%$ is 0,361 and significance level $1 \%$ is 0,463 .

Since " $r$ " observed is greater than " $r$ " table (ro > r table) so he can conclude that value is significant and it means there is significance between students' motivation in learning reading and their achievement.

## E. Interpretation

For the result of compotation coefficient correlation, the writer has decided the formula for the degree of freedom (df) $-\mathrm{df}=$ $\mathrm{N}-2(\mathrm{df}=30-2=28)$ and level significance chosen is $5 \%$, it is obtained that " $r$ " observed is 0,361 (ro $>r$ table). It means that there is significance relationship between students' motivation and their achievement in reading.

Based on the result of the research, the writer concluded that there is significant correlation or there is correlation between students' motivation in learning reading and their achievement. The writer has stated the criteria based on Anas Sudijono, as follow:

| " $r$ " Product Moment $\left(\mathrm{r}_{\mathrm{xy}}\right)$ | Interpretation |
| :---: | :--- |
| $0,00-0,20$ | Between variable X and Y there <br> are correlation, but the correlation <br> is very low until ignored. <br> $0,20-0,40$ <br> are low correlation <br> $0,40-0,70$ |
| Between variable X and Y there |  |
| are fair correlations. |  |
| $0,70-0,90$ | Between variable X and Y there |
| $0,90-100$ | are high correlation |
|  | Between variable X and Y there |

" $r$ " obtained that the writer is 0,63 and is lies between $0,40-$ 0,70 , so the correlation is fair.

Based on the research, it is clear that there is significant correlation between students' motivation and their achievement in reading.

## F. The Heterogeneity and Normality Test of the Data

## 1. Heterogenity Test of the Data

One important assumption of the classical linear regression model is that the disorder $\varepsilon$ Ithat obtained from the population of regression is homoskedastik and all disturbances have the same variance. Heteroscedasticity is one of the classical linear regression assumption violations, in example where the variance of the interference is no longer constant. Usually heteroskedasticity problems often occur in crosssectional data than in time series data.

To see homokedastisitas or heterogeneity of the data, the hypothesis must be concluded as follows:

Ho : There is no heterokedastisitas
H1: There is heterokedastisitas
If the probability value of $\operatorname{Sig}>0.05 \mathrm{Ho}$ is accepted. If the probability of Sig $<0.05 \mathrm{Ho}$ is rejected. To see the result of heterokedastisitas, the writer use SPSS data analysis to find out the result, the result and the explanations are belows:

| Coefficients ${ }^{\text {a }}$ |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Model |  | Unstandardized Coefficients |  | Standardized <br> Coefficients <br> Beta | t | Sig. |
|  |  |  |  |  |  |  |
|  |  | B | Std. Error |  |  |  |
| 1 | (Constant) | -187.008 | 92.94 |  | -2.012 | . 054 |
|  | Motivation | 3.973 | . 900 | .640 | 4.413 | . 000 |

a. Dependent Variable: Students' Motivation

Based on the tabe above table, it can be seen that the value of Sig variable $0.54>0.05$, therefore Ho is accepthed. It means that there is no heterokedastisitas between the two variable, and the data given is homogen. In conclusion, there is a homogeniety on the data.

## 2. Normality Test of the Data

The purpose of the normality test of the data is to find of whether the whether the distribution of the data is normal or not. There are two ways to find out whether the distribution of the data is normal. The first is through histogram graphic and the second is through the Normal P-Plot Standard Residual. If the distribution of the data is normal, it will show a line it means that the distribution of the data spread normally.

To analyze the data, the probability value must be decided, and the probability value ( $\alpha$ ) for the normality test of the data is 0.05 .

The Hypothesis:
Ho : Distribution of the data normal
H1 : Distribution of the data is not normal
If the probability value $\alpha$ is >. Ho is accepted, but if the probability value $\alpha$ is < than. Ho is rejected and H is accepted. To find out whether the distribution is normal, the result of the distribution can be seen on the table below:

One-Sample Kolmogorov-Smirnov Test

|  |  | Achieve Reading | Motivation |
| :--- | :--- | ---: | ---: |
| N |  | 30 | 30 |
| Normal Parameters $^{\mathrm{a}}$ |  | 6,96 | 56,03 |
|  | Std. Deviation | 6,53 | 1,76 |
|  | Most Extreme Differences | Absolute | .146 |
|  | Positive | .072 | .119 |
|  | Negative | -.146 | -.102 |
|  |  | .801 | .651 |
| Kolmogorov-Smirnov Z |  | .543 | .791 |
| Asymp. Sig. (2-tailed) |  |  |  |

a. Test distribution is Normal.

Based on the table above, the value of probability of $\alpha$ is normal. The value of reading speed and reading motivation is bigger than the probability value. The assumption is 543 and 791 > 0.05 , which means that the data distributed normally. Therefore Ho is accepted and H 1 is rejected.

## G. Discussion

The acceptance of the alternative hypothesis implies that there is a correlation between students' motivation and their achievement in reading. One interesting finding in this study is that better the students apply their knowledge.

During the field research the writer did not find that the students mostly found it more difficult to use the words English language. On the previous chapter, has been discussed about the mastery of students.

From the above quotation, it can be concluded that the value for calculated " $r$ " obtained that the writer is 0,63 and is lies between $0,40-0,70$. It is said that the classification of the correlation can be categorized as fair correlation. It means that there is a fair correlation between students' motivation in learning reading and their achievement.
