ABSTRACT

Name: Fathul Aini Fauziyah, NIM: 143400399, Thesis Title: “Application of The Logotherapy Technique In The Hospital Patient’s Treatment Measures (Case Study Stroke at Hospital Sari Asih Kota Serang)”, Department Guidance Counseling Islamic, Faculty of Da’wah, University Islamic State “Sultan Maulana Hasanuddin” Banten.

Care is an action to identify health problems for individuals or groups in planning actions to resolve, reduce, or prevent existing health problems. One of them is Stroke. Aims to improve the quality of life of the patient, the benefits obtained can be felt directly with the handling. With The Hospital patient care for Stroke patients always given motivation to be patient, sincere, steadfast and surrender to Allah in all the wisdom that exists, by way of meaningful life for the sufferings of the illness that happened. Individuals who have a Stroke often feel insecure and can not accept the fact that it may take a lifetime to be ill with paralysis. The conditions experienced by people with Stroke can suppress and threaten the individual.

Based on the above background, then the formulation of the problem in this study is: (1) How the handling of Sari Asih City Hospital in the treatment of stroke patients? (2) How the application of logotherapy techniques to stroke patients? (3) The results of the application of logotherapy techniques to stroke patients?

In accordance with the formulation of the problem, then the purpose of this study is: (1) To know the handling in the treatment of Stroke patients in Hospital Sari Asih Kota Serang, (2) To provide the application of the logotherapy technique in Stroke patients, (3) To determine the results of the application of the logotherapy technique in stroke patients.

In this research conducted in Sari Asih Hospital City Serang, with sample number of five respondents of patient suffering from stroke disease. Type of research in this thesis is a qualitative research that is direct action research, while data collection techniques include: observation, interview, documentation, data analysis techniques.

Based on the research that has been done, it can be concluded that: The first picture of the handling of Stroke patients in the Sari Asih Hospital city Serang using diagnosis, administration of medication, therapy, continuous treatment control, and method of therapy logotherapy or spiritual guidance to receive the wisdom of the ordeal in his pain, Second in the application of logotherapy techniques using an techniques of paradoxical intentions, reflection, medical ministry and individual counseling approach that is build relationships (attending), identify and assess problems, facilitate therapeutic changesdan As for the results the application logotherapy is able to make the patient interpret life in the suffering experienced by the disease that occurred in his life.
