## CHAPTER IV

## THE RESULT OF THE RESEARCH

## A. The Description of the Data

In this chapter, the writer will show the result of the students test score. The writer conducted experimental research. The writer takes 72 students at the second grade of MTs Negeri 1 Kota Serang in academic year 2017/2018. The goal of the research is intended to find out the accurate data in accord with the research title. The sample of this study divided into two classes. They are 36 students from class VIII F as control class and 36 students from VIII H as experimental class.

For instrument, the writer used test. There are pre-test and post-test for experimental class and control class. The researcher use statistic calculation of " $t$ " test in analysing the data. " $t$ " test formula to know the different means of pre-test and post-test result and pre-test and post-test treatment.

## 1. The Score of Pre-test and Post-Test of Experimental Class

Based on research conducted, the result of pre-test at experiment class got the score 4340. The average score of pre-test was 40.15 . The score of pre-test will be described in the following table:

Table 1

Mean of pre-test:
$\mathrm{X}=\sum \mathrm{X}=\frac{(x 1+x 2+\cdots+x 30)}{N}=\frac{4340}{36}=44.36$

The table 1 above showed the results of the students' pre-test score at the experimental class. The data showed the maximum score was 55 and the minimum score was 24.6 . One student gets maximum score and four students get minimum score. The average score of pre-test was 40.15 .

While the result of post-test at the experimental got better score, it can be described as follow:
