## CHAPTER IV

## THE RESULT AND DISCUSSION

## A. Description of Data

In this chapter the writer would like to present the description of the data obtained. As writer stated at the previous chapter that the population of the student of MTs Negeri 1 Serang and the subject of this research is the third grade students. In this research, the writer divided them into two classes, 36 students as experimental class, it is from class IX-1, and 35 students as control class, it is from IX-2.

To find out the effectiveness of Two Stay Two Stray, the writer identify some result, they are: the score of student before treatment, and the score of student after treatment, the differences between pre-test and post-test scores of students and from the students' condition between the students who are learning by two stay and two stray method and the students who are not learning by two stray two stray method.

To know the effectiveness of Two Stay Two Stray combined with Think Talk Write Method to Improve Students’ Writing Skill, the writer gives the test to students as the sample both at the experimental class and at control class. The test used in this research divided into two types, there are pre-test and post-test, the pre-test is the test that is given before treatment, and the post-test is given after treatment.

The maximum score of contents/ ideas was 30 , the maximum score of organization is 20 , the maximum score of vocabulary was 20 , the maximum score of language use was 25 , and the maximum score of group discussion was 5 . The highest total score of all criteria as 100 , and the lowest score of all criteria was 65 .

The writer describes the data at experimental and control class as bellow:

## 1. Experimental Class

The writer described the result of a pre-test and post test at the experimental class by the table as follow:

Table 4.1
The Students' score of pre-test and post test at the experimental class

| No. | Respondents | Test |  |
| :---: | :---: | :---: | :---: |
|  |  | Pre-test (X1) | Post-test (X2) |
| 1 | AF | 74 | 79 |
| 2 | ASM | 77 | 82 |
| 3 | AFN | 77 | 84 |
| 4 | ANN | 83 | 87 |
| 5 | ARM | 81 | 85 |
| 6 | DN | 82 | 86 |
| 7 | DR | 72 | 74 |
| 8 | DP | 79 | 83 |
| 9 | DPW | 74 | 78 |
| 10 | FO | 83 | 87 |
| 11 | FC | 77 | 83 |
| 12 | FAW | 83 | 86 |
| 13 | IR | 69 | 75 |
| 14 | IF | 75 | 79 |
| 15 | ID | 78 | 82 |
| 16 | IM | 71 | 79 |
| 17 | IH | 75 | 79 |

| 18 | KL | 76 | 82 |
| :---: | :---: | :---: | :---: |
| 19 | KLW | 79 | 84 |
| 20 | MI | 78 | 86 |
| 21 | MDJ | 72 | 79 |
| 22 | MIM | 81 | 86 |
| 23 | MR | 72 | 79 |
| 24 | MZR | 77 | 83 |
| 25 | MS | 71 | 76 |
| 26 | NRI | 77 | 84 |
| 27 | PN | 78 | 83 |
| 28 | RDM | 74 | 79 |
| 29 | RS | 69 | 74 |
| 30 | SW | 73 | 79 |
| 31 | SAF | 70 | 75 |
| 32 | SAA | 72 | 76 |
| 33 | SM | 73 | 79 |
| 34 | SN | 73 | 79 |
| 35 | WA | 77 | 84 |
| 36 | ZH | 74 | 78 |
|  | Total |  | 75.72 |
|  | Average |  | 80.91 |
|  |  |  |  |

The Table 4.1 above shows that the result of the students' pre-test scores on the criteria in writing text at the experimental class. The data shows that the maximum score in Pre Test was 83 and the minimum score was 69 . The different with Post Test score, the maximum score was 87 and the minimum score was 74 . While the result of a post-test score at the experimental class got better.

Based on the explanation above, it is shows the result of post-test at the experimental class got the significant improvement after giving treatment, it is seen
from the average of the post-test was better than the average of the pre-test, that $75.72<80.91$.

## 2. Control Class

The writer describes the result of a pre-test at the control class by the table below:

Table 4.2
The Students' score of pre-test and post test at the control class

| No. | TEST |  |  |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  |  | Pre-test (Y1) | Post-test (Y2) |
| 1 | AG | 79 | 83 |
| 2 | AM | 68 | 72 |
| 3 | AF | 69 | 74 |
| 4 | AS | 77 | 83 |
| 5 | BH | 67 | 74 |
| 6 | BI | 70 | 76 |
| 7 | DS | 80 | 85 |
| 8 | FR | 68 | 72 |
| 9 | HW | 68 | 72 |
| 10 | HN | 70 | 74 |
| 11 | HNK | 75 | 77 |
| 12 | IR | 70 | 76 |
| 13 | IF | 76 | 80 |
| 14 | IT | 76 | 77 |
| 15 | JA | 79 | 85 |
| 16 | KL | 75 | 79 |

| 17 | LMJ | 78 | 84 |
| :---: | :---: | :---: | :---: |
| 18 | MN | 67 | 74 |
| 19 | MS | 69 | 73 |
| 20 | MA | 77 | 82 |
| 21 | MD | 69 | 75 |
| 22 | MRR | 75 | 78 |
| 23 | MJ | 67 | 74 |
| 24 | NP | 70 | 76 |
| 25 | NS | 68 | 75 |
| 26 | NL | 77 | 83 |
| 27 | NK | 75 | 79 |
| 28 | NAH | 69 | 75 |
| 29 | NOP | 79 | 84 |
| 30 | RDP | 76 | 82 |
| 31 | RPR | 67 | 75 |
| 32 | RDE | 71 | 77 |
| 33 | RN | 69 | 73 |
| 34 | SK | 75 | 79 |
| 35 | UH | 79 | 84 |
| Total |  | $\begin{gathered} \Sigma \mathrm{Y} 1=2544 \\ 72.68 \end{gathered}$ | LY2 $=2723$ |
| Average |  |  | 77.8 |

The Table 4.2 shows that the results of the students' pre-test and post test scores on the criteria in writing at the control class. That the data shows the maximum score in pre test was 80 , and the minimum score was 67 . The different with post test score, the maximum score was 85 and the minimum score was 72 . average of score of the pre-test was 72.68 . While the result of a post-test score at the experimental class got better.

Based on the explanation above, it is shows the result of post-test at the experimental class got the significant improvement after giving treatment, it is seen from the average of the post-test was better than the average of the pre-test, that $72.68<77.8$.

## B. Data Analysis

1. Experimental Class

The writer analysis the data by comparing students' score in pre-test and post-test in experimental class. It is explained by the table as follow :

Table 4.3

The different score between pre-test and post-test at experiment class

| No. | Respondents | Test |  | Deviation(X=X2-X1) | Squared <br> Deviation $\left(\mathrm{X}^{2}\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Pre-test (X1) | Post-test (X2) |  |  |
| 1 | AF | 74 | 79 | 5 | 25 |
| 2 | ASM | 77 | 82 | 5 | 25 |
| 3 | AFN | 77 | 84 | 7 | 49 |
| 4 | ANN | 83 | 87 | 4 | 16 |
| 5 | ARM | 81 | 85 | 4 | 25 |
| 6 | DN | 82 | 86 | 4 | 16 |
| 7 | DR | 72 | 74 | 2 | 4 |
| 8 | DP | 79 | 83 | 4 | 16 |
| 9 | DPW | 74 | 78 | 4 | 16 |

| 10 | FO | 83 | 87 | 4 | 16 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 11 | FC | 77 | 83 | 6 | 36 |
| 12 | FAW | 83 | 86 | 5 | 25 |
| 13 | IR | 69 | 75 | 6 | 36 |
| 14 | IF | 75 | 79 | 4 | 16 |
| 15 | ID | 78 | 82 | 6 | 36 |
| 16 | IM | 71 | 79 | 8 | 64 |
| 17 | IH | 75 | 79 | 4 | 16 |
| 18 | KL | 76 | 82 | 6 | 36 |
| 19 | KLW | 79 | 84 | 5 | 25 |
| 20 | MI | 78 | 86 | 8 | 64 |
| 21 | MDJ | 72 | 79 | 7 | 49 |
| 22 | MIM | 81 | 86 | 5 | 25 |
| 23 | MR | 72 | 79 | 7 | 49 |
| 24 | MZR | 77 | 83 | 6 | 36 |
| 25 | MS | 71 | 76 | 5 | 25 |
| 26 | NRI | 77 | 84 | 7 | 49 |
| 27 | PN | 78 | 83 | 5 | 25 |
| 28 | RDM | 74 | 79 | 5 | 25 |
| 29 | RS | 69 | 74 | 5 | 25 |
| 30 | SW | 73 | 79 | 6 | 36 |
| 31 | SAF | 70 | 75 | 5 | 25 |
| 32 | SAA | 72 | 76 | 4 | 16 |
| 33 | SM | 73 | 79 | 6 | 36 |
| 34 | SN | 73 | 79 | 6 | 36 |
| 35 | WA | 77 | 84 | 7 | 49 |
| 36 | ZH | 74 | 78 | 4 | 16 |

| Total | $\Sigma \mathrm{X} 1=2726$ | $\Sigma \mathrm{X} 2=2913$ | $\Sigma \mathrm{X}=195$ | $\Sigma \mathrm{X}^{2}=1075$ |
| :--- | :--- | :--- | :--- | :--- |

Table 4.3 above shows that the score difference between pre-test and post-test at the experimental class. The difference score was the results from the post-test scores subtract with pre-test score. There was significant difference score between pre-test and post-test at the experimental class, the biggest difference score was 8 and the lowest difference score was 2 . It is described by the graphic below:

## Graphic 4.1

The difference score between pre-test and post-test of the experimental class

Graphic 4.1 above showed that the results of students' pre-test and post-test scores on the criteria in writing procedure text at the experimental class. Data showed the pre-test score, the maximum score was 83 , and the minimum score was 69 . There are three students who got the maximum and three students who got the minimum score. For the post-test score, the
maximum score was 87 and the minimum score was 74 . There are two students who got the maximum score and two students who got the minimum score.

## 2. Control Class

The writer analyzed the data by comparing student' score in pre-test and post-test at the control class, explaining by the table below:

Table 4.4
The different score between pre-test and post-test at control class

| No. | Respondents | TEST |  | Deviation <br> (Y=Y2-Y1) | Squared <br> Deviation <br> $(Y 2)$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Pre-test <br> $(Y 1)$ | Post-test <br> $(Y 2)$ |  | 4 |
| 1 | AG | 79 | 83 | 4 | 16 |
| 2 | AM | 68 | 72 | 4 | 16 |
| 3 | AF | 69 | 74 | 5 | 25 |
| 4 | AS | 77 | 83 | 6 | 36 |
| 5 | BH | 67 | 74 | 7 | 49 |
| 6 | BI | 70 | 76 | 6 | 36 |
| 7 | DS | 80 | 85 | 5 | 25 |
| 8 | FR | 68 | 72 | 4 | 16 |
| 9 | HW | 68 | 72 | 6 | 36 |
| 10 | HN | 70 | 74 | 4 | 16 |
| 11 | HNK | 75 | 77 | 2 | 4 |
| 12 | IR | 70 | 76 | 6 | 36 |
| 13 | IF | 76 | 80 | 4 | 16 |
| 14 | IT | 76 | 77 | 1 | 1 |
| 15 | JA | 79 | 85 | 6 | 36 |

| 16 | KL | 75 | 79 | 4 | 16 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 17 | LMJ | 78 | 84 | 6 | 36 |
| 18 | MN | 67 | 74 | 7 | 49 |
| 19 | MS | 69 | 73 | 4 | 16 |
| 20 | MA | 77 | 82 | 5 | 25 |
| 21 | MD | 69 | 75 | 6 | 36 |
| 22 | MRR | 75 | 78 | 3 | 9 |
| 23 | MJ | 67 | 74 | 7 | 49 |
| 24 | NP | 70 | 76 | 6 | 36 |
| 25 | NS | 68 | 75 | 7 | 49 |
| 26 | NL | 77 | 83 | 6 | 36 |
| 27 | NK | 75 | 79 | 4 | 16 |
| 28 | NAH | 69 | 75 | 6 | 36 |
| 29 | NOP | 79 | 84 | 5 | 25 |
| 30 | RDP | 76 | 82 | 6 | 36 |
| 31 | RPR | 67 | 75 | 8 | 64 |
| 32 | RDE | 71 | 77 | 6 | 36 |
| 33 | RN | 69 | 73 | 4 | 16 |
| 34 | SK | 75 | 79 | 5 | 25 |
| 35 | UH | 79 | 84 | 5 | 25 |
|  | Total | $\Sigma \mathrm{Y} 1=2544$ | $\Sigma Y 2=2723$ | $\Sigma Y=177$ | $\Sigma \mathrm{Y}^{2}=916$ |

Table 4.4 above shows that the score difference between pre-test and post-test at the control class. The difference score is the results from the post-test score subtract pre-test score. There is significant difference scores between pre-test and post-test at the control class, the biggest difference score was 8 , and the lowest different was 1 .

Graphic 4.2

The different score between pre-test and post-test of control class

Graphic 4.2 above shows that the results of the students' pre-test and posttest scores on the criteria in writing text at the control class.

The Data showed in the pre-test score the maximum was 80 , and the minimum was 67 . There is one a student who got the maximum score and four students who got the minimum score. From the post-test score, the maximum score is 85 and the minimum score is 71 . There are two students who got the maximum score and one student who got the minimum score.

## C. Statistical Hypothesis Testing

To test the hypothesis the data obtained from both pre-test and post-test are analyzed and calculated by using formula. From the above data is gotten, the writer t-test calculated using steps as follow:

1. Determine mean of score experimental class (MX), with formula:

$$
\begin{aligned}
M_{X} & =\frac{\sum X}{N} \\
& =\frac{195}{36} \\
& =5,41
\end{aligned}
$$

The result above shows about the average score (mean) of the experimental class. The writer got the data from $\Sigma \mathrm{x}_{1}, \Sigma \mathrm{x}_{2}$, and $\Sigma \mathrm{x}$. After wards the researcher calculated the data based on the formula above.
2. Determine mean of score control class (MY), with formula:

$$
\begin{aligned}
M_{Y} & =\frac{\sum Y}{N} \\
& =\frac{177}{35} \\
& =5,05
\end{aligned}
$$

The result above shows about the average score (mean) of the experimental class. The writer gets the data from $\Sigma \mathrm{Y}_{1}, \Sigma \mathrm{Y}_{2}$, and $\Sigma \mathrm{Y}$. Afterwards the researcher calculates the data based on the formula above.
3. Determine the total square of error in experimental class, with formula:

$$
\begin{aligned}
\Sigma x^{2} & =\Sigma x^{2}-\frac{(\Sigma x)^{2}}{N} \\
& =1075-\frac{(195)^{2}}{36} \\
& =1075-\frac{38025}{36} \\
& =1075-1056,25 \\
& =18,75
\end{aligned}
$$

The result above shows about the score quadrates at the experimental class. The writer getst the data from $\Sigma \mathrm{x}_{1}, \Sigma \mathrm{x}_{2}, \Sigma \mathrm{x}$ and $\Sigma \mathrm{x}^{2}$. Afterwards she calculated the data based on the formula above.
4. Determine the total square of error in control class, with formula:

$$
\begin{aligned}
\Sigma Y^{2} & =\Sigma Y^{2}-\frac{(\Sigma Y)^{2}}{N} \\
& =916-\frac{(177)^{2}}{35} \\
& =916-\frac{31329}{35} \\
& =916-895,11 \\
& =20,89
\end{aligned}
$$

The result above showed about the score quadrates at the control class. The writer got the data from $\Sigma \mathrm{Y}_{1,}, \Sigma \mathrm{Y}_{2}, \Sigma \mathrm{Y}$ and $\Sigma \mathrm{Y}^{2}$. Afterwards she calculated the data based on the formula above.
5. Calculate the t-Test

$$
\begin{aligned}
t & =\frac{M_{x}-M_{y}}{\sqrt{\left(\frac{\sum x^{2}+\sum y^{2}}{N_{x}+N_{y}-2}\right)\left(\frac{N_{x}+N_{y}}{N_{x} \cdot N_{y}}\right)}} \\
& =\frac{5,41-5,05}{\sqrt{\left(\frac{18,75+20,89}{36+35-2}\right)\left(\frac{36+35}{36.35}\right)}} \\
& =\frac{0,36}{\sqrt{\left(\frac{39,64}{69}\right)\left(\frac{71}{1260}\right)}} \\
& =\frac{0,36}{\sqrt{(0,53)(0,05)}} \\
& =\frac{0,36}{\sqrt{0,0265}}
\end{aligned}
$$

$$
\begin{aligned}
& =\frac{0,36}{0,16} \\
& =\mathbf{2 , 2 5}
\end{aligned}
$$

6. Determine the $t_{\text {table }}$ with significance $5 \%$

$$
\begin{aligned}
\mathrm{Df} & =N_{X}+N_{Y}-2 \\
& =36+35-2 \\
& =69 \\
& =1,995
\end{aligned}
$$

Based on the calculation above is known that $t_{\text {table }}$ with significant $5 \%=1,995, t_{\text {observation }}=2,25>t_{\text {table }}=1,995$. it is conclude that the writer rejected $H_{0}: t_{0}<$ : it means there is no significant effect of Two Stay Two Stray combined with Think Talk Write method to improve students' writing skill. And accepted $H_{a}: t_{0}>t_{t}$ : it means there is significant effect of Two Stay Two Stray combined with Think Talk Write method to improve students' writing skill.

From the result of the calculation is obtained the value of the test $t_{0}$ 2,25 . The writer uses degree of significance of the $t_{\text {table }}$ of $5 \%$. it can be seen that on the $\mathrm{df}=69$ and on the degree of significance of $5 \%$ the value of the degree significance is 1,995 , comparing the $t_{o}$ with value of degree significance, the result $t_{\text {count }}=2,25>t_{\text {table }}=1,995$. Since $t_{\mathrm{o}}$ from score obtained from the result of calculating, the alternative hypothesis $\left(H_{a}\right)$ is accepted and the null hypothesis $\left(\mathrm{H}_{\mathrm{o}}\right)$ is rejected.

## D. Interpretation of Data

The analysis is aimed to know the effectiveness of two stray two stray combined with think talk write method to improve students' writing skill. we have already known that the mean score of experimental class is 75,72 in pretest and 80,91 in post-test. But the mean score of control class is 72,68 in pre-
test and 77,8 in post-test. Based on the calculation above the experiment class gets better than control class.

Before deciding the result of hypothesis, the writer purposes the interpretation toward procedure as follow:
a. If $t_{\text {observation }}>t_{\text {table }}$ : it means there is significant effectiveness two stay two stray combined with think talk write method to improve students' writing skill.
b. If $\mathrm{t}_{\text {observation }}<\mathrm{t}_{\text {table }}:$ it means there is no effectiveness between effectiveness two stay two stray combined with think talk method write to improve students' writing skill.

According to the data, the value of $t_{\text {observation }}$ is bigger than $t_{\text {table }}$ $t_{\text {observation }}=2,25>\mathrm{t}_{\text {table }}=1,995(5 \%)$, so $\mathrm{H}_{0}$ is rejected and $\mathrm{H}_{\mathrm{a}}$ is accepted.

From the result above, the writer gives conclusion that it means there is a significant effectiveness of Two Stay Two Stray combined with Think Talk Write method to improve students' writing skill. It can be seen that the student get better score by two stay two stray technique. Two stay two stray structure which is one type of cooperative learning groups provide opportunities to share results and information to other groups, and will lead students to be active, both discussion, asked questions, find answer explaining and listening to material describe by a friends.

This could be seen after comparing the score of pre-test (before using two stay two stray technique) and post-test (after using two stay two stray technique). The result of the student's own creativity. From the activities that students do, students become easier to describe something in writing, because students have been exploring and digging information actively and independently. so the idea of writing to describe something can be easily stated.
