## CHAPTER IV

## RESULT AND DISCUSSION

## A. Data Description

In this chapter, the writer described the data that gotten from the students of MTs Al-Khairiyah Pipitan and the subject of this research is the second grade students. In this research, the writer took 60 students as the sample. The writer divided them into two groups, 30 students as experimental class from VIII E and 30 students as control class from VIII F .

To know how the effectiveness of teaching reading by using Cooperative Integrated Reading and Composition (CIRC) technique in teaching reading on narrative text. The students conducted field research and gave the students pre-test before teaching and used CIRC technique in the experimental class and after teaching using CIRC technique the writer gave post-test and it would be used as data in this research.

Each of the tests, pre-test and post-test consists of 15 multiple choice and 5 essay. Having finished the field research, the writer got the score as follow:

1. The Score of Pre-test and Post-test of Experimental Class

The students in VIII E class as experimental class obtained mean score 49,4 for pre-test and 61,8 for post-test. The score they got in these tests would be described in following table:

Table 4.1

The Score of Pre-test and Post-test
At Experimental Class

| No | Name of Students | Pre-test $\left(\mathbf{X}_{1}\right)$ | Post-test $\left(\mathbf{X}_{2}\right)$ |
| :---: | :---: | :---: | :---: |
| 1 | ASH | 53 | 63 |
| 2 | DS | 47 | 63 |
| 3 | HHH | 50 | 53 |
| 4 | IA | 43 | 40 |
| 5 | KI | 53 | 87 |
| 6 | MP | 43 | 50 |
| 7 | MS | 50 | 63 |
| 8 | NA | 33 | 47 |
| 9 | NP | 53 | 80 |
| 10 | NPL | 70 | 80 |
| 11 | PSI | 50 | 67 |
| 12 | SA | 30 | 47 |
| 13 | SE | 40 | 83 |
| 14 | SFNH | 50 | 53 |
| 15 | SM | 37 | 43 |
| 16 | SN | 43 | 53 |

| 17 | SNA | 37 | 50 |
| :---: | :---: | :---: | :---: |
| 18 | SNH | 53 | 80 |
| 19 | SNR | 67 | 87 |
| 20 | SO | 47 | 50 |
| 21 | SR | 40 | 47 |
| 22 | SRF | 53 | 50 |
| 23 | SZA | 40 | 40 |
| 24 | TN | 47 | 57 |
| 25 | TW | 53 | 73 |
| 26 | WAR | 53 | 63 |
| 27 | WS | 57 | 67 |
| 28 | WZ | 63 | 73 |
| 29 | ZA | 77 | 83 |
| 30 | ZRA | 50 | 63 |
| $\mathrm{N}=30$ | TOTAL SCORE | 1482 | 1855 |
|  | AVERAGE | 49,4 | 61,8 |

Mean of Pre-test:

$$
\mathrm{X}=\frac{\sum X_{1}}{N_{1}}=\frac{1482}{30}=49,4
$$

Mean of Post-test:
$\mathrm{M}_{1}=\frac{\sum X_{1}}{N_{1}}=\frac{1855}{30}=61,8$

Based on the calculation on the table 4.1 of pre-test and post-test assessment aat experimental class, it showed that the result of experimental class got the significant improvement after giving treatment. It seen from the average score of post-test is better that the average score pre-test, that is $61,8>49,4$ the students' improvement score caused by the writer used the CIRC technique in teaching reading. If seen from the students' improvement score it means that the program used is success in teaching reading on narrative text.

The writer described the students' improving score of pre-test and post-test at the experimental class by the graphic as follow:

## Graphic 4.1

The Score Pre-test and Post-test at Experimental Class

The graphic above showed about the comparison between score of pre-test and post-test at the experimental class. according to the graphic
above the score of post-test is better than the score of pre-test commonly.
2. The score of Pre-test and Post-test of Control Class

The students in VIII F class as control class obtained score 41,6 for pre-test and 50,9 for post-test. The score they got in these tests would be described in following table:

Table 4.2

The Score of Pre-test and Post-test

At Control Class

| No | Name of Students | Pre-test <br> $\left(\mathbf{X}_{\mathbf{1}}\right)$ | Post-test <br> $\left(\mathbf{X}_{\mathbf{2}}\right)$ |
| :---: | :---: | :---: | :---: |
| 1 | AA | 43 | 43 |
| 2 | ANF | 40 | 40 |
| 3 | AO | 30 | 60 |
| 4 | AZ | 53 | 63 |
| 5 | BHA | 33 | 37 |
| 6 | DA | 57 | 60 |
| 7 | DIH | 27 | 47 |
| 8 | FBAS | 40 | 37 |
| 9 | HO | 27 | 43 |
| 10 |  |  | 40 |

| 11 | HU | 33 | 37 |
| :---: | :---: | :---: | :---: |
| 12 | IF | 30 | 67 |
| 13 | IK | 60 | 70 |
| 14 | IT | 37 | 43 |
| 15 | JS | 27 | 70 |
| 16 | LHA | 40 | 37 |
| 17 | M | 50 | 57 |
| 18 | NAF | 50 | 40 |
| 19 | NKD | 40 | 40 |
| 20 | RI | 67 | 73 |
| 21 | S | 23 | 53 |
| 22 | SF | 30 | 37 |
| 23 | SIS | 53 | 57 |
| 24 | SM | 47 | 43 |
| 25 | SN | 40 | 43 |
| 26 | SP | 37 | 47 |
| 27 | SR | 33 | 40 |
| 28 | TRS | 70 | 77 |
| 29 | UA | 40 | 57 |
| 30 | WL | 53 | 70 |
| $\mathrm{N}=30$ | TOTAL SCORE | 1247 | 1528 |

|  | AVERAGE | 41,6 | 50,9 |
| :--- | :---: | :---: | :---: |

Mean of Pre-test:
$\mathrm{X}=\frac{\sum X_{1}}{N_{1}}=\frac{1247}{30}=41,6$

Mean of Post-test:
$\mathrm{M}_{1}=\frac{\sum X_{1}}{N_{1}}=\frac{1528}{30}=50,9$

Based on explanation above, it showed that the result of control class did not have the significant improvement. It seen from the average score of pre-test and post-test that is 41,6 and 50,9 . It caused the control class did not used CIRC technique in teaching reading on narrative text.

## Graphic 4.2

The Scores of Pre-test and Post-test at Control Class

The graphic above showed about the comparison between score of pre-test and post-test at the conrol class. according to the grapic above the score of post test is better the score of pre-test commonly.
3. Interview

The writer did the interview to an English teacher at the second grade of MTs Al-Khairiyah Pipitan (on April, 13, 2019) to know the objective condition of the students. It has been recorded by the writer as subsets in this research to complete data. After that, the writer was back to the teacher for checked it (between the script interview and what the teacher said). The detail of interview result could be seen at appendix.

## B. Data Analysis

After getting the data from the post-test score of two classes, then the writer analyzed it by using t-test. The result calculation of post-test at the experimental class and control class would be described in following table:

## Table 4.3

The Result Calculation of Post-test at the Experimental Class $\left(\mathbf{X}_{\mathbf{1}}{ }^{\mathbf{1}}\right)$ and the Control Class $\left(\mathrm{X}_{2}{ }^{2}\right)$

| No | Score |  | $\mathrm{x}_{1}$ | $\mathrm{X}_{2}$ | $\mathrm{x}_{1}{ }^{2}$ | $\mathrm{x}_{2}{ }^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathrm{X}_{1}$ | $\mathbf{X}_{2}$ |  |  |  |  |
| 1 | 63 | 43 | 1,2 | -7,9 | 1,44 | 62,41 |
| 2 | 63 | 40 | 1,2 | -10,9 | 1,44 | 118,81 |
| 3 | 53 | 60 | -8,8 | 9,1 | 77,44 | 82,81 |
| 4 | 40 | 63 | -21,8 | 12,1 | 475,24 | 146,41 |
| 5 | 87 | 37 | 25,2 | -13,9 | 635,04 | 193,21 |
| 6 | 50 | 60 | -11,8 | 9,1 | 139,24 | 82,81 |
| 7 | 63 | 47 | 1,2 | -3,9 | 1,44 | 15,21 |
| 8 | 47 | 37 | -14,8 | -13,9 | 219,04 | 193,21 |
| 9 | 80 | 43 | 18,2 | -7,9 | 331,24 | 62,41 |
| 10 | 80 | 40 | 18,2 | -10,9 | 331,24 | 118,81 |
| 11 | 67 | 37 | 5,2 | -13,9 | 27,04 | 193,21 |
| 12 | 47 | 67 | -14,8 | 16,1 | 219,04 | 259,21 |
| 13 | 83 | 70 | 21,2 | 19,1 | 449,44 | 364,81 |
| 14 | 53 | 43 | -8,8 | -7,9 | 77,44 | 62,41 |
| 15 | 43 | 70 | -18,8 | 19,1 | 353,44 | 394,81 |
| 16 | 53 | 37 | -8,8 | -13,9 | 77,44 | 193,21 |
| 17 | 50 | 57 | -11,8 | 6,1 | 139,24 | 37,21 |
| 18 | 80 | 40 | 18,2 | -10,9 | 331,24 | 118,81 |

| 19 | 87 | 40 | 25,5 | $-10,9$ | 635,04 | 118,81 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 20 | 50 | 73 | $-11,8$ | 22,1 | 139,24 | 488,41 |
| 21 | 47 | 53 | $-14,8$ | 2,1 | 219,04 | 4,41 |
| 22 | 50 | 37 | $-11,8$ | $-13,9$ | 139,24 | 193,21 |
| 23 | 40 | 57 | $-21,8$ | 6,1 | 475,24 | 37,21 |
| 24 | 57 | 43 | $-4,8$ | $-7,9$ | 23,04 | 62,41 |
| 25 | 73 | 43 | 11,2 | $-7,9$ | 125,44 | 62,41 |
| 26 | 63 | 47 | 1,2 | $-3,9$ | 1,44 | 15,21 |
| 27 | 67 | 40 | $-21,8$ | $-10,9$ | 475,24 | 118,81 |
| 28 | 73 | 77 | 11,2 | 26,1 | 125,44 | 681,21 |
| 29 | 83 | 57 | 21,2 | 6,1 | 449,44 | 37,21 |
| 30 | 63 | 70 | 1,2 | 19,1 | 1,44 | 364,81 |
| $\sum$ | 1855 | 1528 | $-25,7$ | 1 | 6696,4 | 4883,9 |
| 27 |  |  |  |  |  |  |

After that the writer calculated them based the $t$-test formula:

1. The average score of experimental class

$$
\mathrm{M}_{1}=\frac{\sum X_{1}}{N_{1}}=\frac{1855}{30}=61,8
$$

2. The average score of control class

$$
\mathrm{M}_{1}=\frac{\sum X_{1}}{N_{1}}=\frac{1528}{30}=50,9
$$

3. Sum of the squared deviation score of experimental class
$\sum X_{1}{ }^{2}=6696,4$
4. Sum of the squared deviation score of control class
$\sum \mathrm{X}_{2}{ }^{2}=4883,9$
5. Determining $\mathrm{t}_{\text {table }}\left(\mathrm{t}_{\mathrm{t}}\right)$ by using formula:

$$
\mathrm{df}=\mathrm{N}_{1}+\mathrm{N}_{2}-2=30+30-2=58
$$

The writer uses df from 58. In degree of significance $5 \%$ from $t_{t}=2,00$ and in degree of significance $1 \%$ from $58_{\mathrm{t}}=2,66$.

From the result of the calculation above, it is obtained that the value of $t_{o}\left(\mathrm{t}_{\text {observation }}\right)$ is 3,77. After that the data, the writer compared it with $\mathrm{t}_{\mathrm{t}}$ $\left(\mathrm{t}_{\text {table }}\right)$ both in degree significance $5 \%$ and $1 \%$.

## C. Hypothesis Testing

To prove it, the data obtained from experimental class and control class are calculated with the assumption as follow:

If $H_{a}: \mathrm{t}_{\text {observation }}>\mathrm{t}_{\text {table }}$ : The alternative hypothesis is accepted. It means that there is significant effectiveness of teaching reading comprehension between using Cooperative Integrated Reading and Composition (CIRC) technique and without using Cooperative Integrated Reading and Composition (CIRC) technique.

If $H_{0}$ : $\mathrm{t}_{\text {observation }}<\mathrm{t}_{\text {table }}$ : The null hypothesis is rejected. It means that there
is not significant effectiveness of teaching reading comprehension between using Cooperative Integrated Reading and Composition (CIRC) technique and without using Cooperative Integrated Reading and Composition (CIRC) technique.

From the result of the calculation above, it is obtained that the value of $t_{0}\left(t_{\text {observation }}\right)$ is 3,77, degree freedom (df) is 58. In degree of significance $5 \%$ from $58\left(\mathrm{t}_{\text {table }}\right)=2,00$, in degree of significance $1 \%$ from $58\left(\mathrm{t}_{\text {table }}\right)=$ 2,66.

After getting the data, the writer compared it with $\mathrm{t}_{\mathrm{t}}\left(\mathrm{t}_{\text {table }}\right)$ both in degree significance $5 \%$ and $1 \%$. Therefore, $\mathrm{t}_{\mathrm{o}}: \mathrm{t}_{\mathrm{t}}=3,77>2,00$ in degree of significance $5 \%$ and $t_{0}: t_{t}=3,77>2,66$ in degree of significance $1 \%$.

The statistic hypothesis stated that if $t_{o}$ is higher than $t_{t}$, it showed that $\mathrm{H}_{\mathrm{a}}$ (alternative hypothesis) of the result is accepted and $\mathrm{H}_{\mathrm{o}}$ (null hypothesis) is rejected. It means that there is effectiveness of teaching reading on narrative text between using Cooperative Integrated Reading and Composition (CIRC) technique and without using CIRC technique.

## D. Data Interpretation

In the class VIII E as experimental class, the highest score of pretest is 77 and the lowest score is 30 . The highest score of post-test is 87 and the lowest score is 40 . The mean of pre-test score obtained by students in
this class is 49,4 and the mean of post-test is 61,8 . The mean of pre-test and post-test score has good enough improvement it seen by $61,8>49,4$. The improvement caused by the experimental class have learned reading comprehension on narrative text by using Cooperative Integrated Reading and Composition (CIRC) technique that not used by teacher before.

In the class VIII F as control class, the highest score of pre-test is 70 and the lowest score is 23 . The highest score of post-test is 77 and the lowest score is 37 . The mean of pre-test and post-test in this class is 41,6 and the mean of post-test is 50,9 . In this class also realized improvement but lower than experimental class. it caused by the control class did not learn reading comprehension on narrative text by using Cooperative Integrated Reading and Composition (CIRC) technique.

Based on the result above, the experimental class, the students who are taught using CIRC technique has the mean value 61,8 because when CIRC technique is applied to students, they become more relaxed, entertain, motivated, and active in the classroom. While, the control class, the students who are not taught using CIRC technique has mean value 50,9 because they are not taught using CIRC technique. So that, the students feeling bored and monotonous in the classroom. It means that there is significant effective using CIRC technique in teaching reading on narrative text at the second grade of MTs Al-Khairiyah Pipitan.
