## CHAPTER IV

## RESULT AND DISCUSSION

This chapter explain the result and discussion from researcher. Based on data analysis and findings which explore about the result from data which has been analyzed.

## A. Description of Data

The researcher did the research and got the complete data from the research instrument includes pre test and post test. To gain the objectives of the research, the researcher had analyzed the data systematically and accurately. The data was analyzed in order to explain conclusion about the objective of the study.

The researcher collecting the data from observing first grade senior high school student's MAN 2 KOTA SERANG, with choosing XBahasa class and X-IPA 1 class. The X-Bahasa class as experimental class and X-IPA 1 as controll class. To collect the data, pre test and post test was given to the students. After the test was given, the researcher analyzed the data to found out significant difference between summarizing technic using manga as media learning and summarizing technic without using manga as media learning. The resarcher describes the data as bellow:

## 1. Experimental Class

The writer describes the result of pre test of the experimental class on the table below:

Table 4.1
The students' pre test score at experimental class

| No | NAME | SCORE |
| :---: | :---: | :---: |
| 1 | FA | 74 |
| 2 | MNB | 74 |
| 3 | FPN | 74 |
| 4 | ANF | 74 |
| 5 | YA | 74 |
| 6 | GNH | 75 |
| 7 | NNH | 75 |
| 8 | FM | 75 |
| 9 | AM | 75 |
| 10 | NS | 75 |
| 11 | MNB | 75 |
| 12 | W | 75 |
| 13 | NJ | 75 |
| 14 | HZH | 69 |
| 15 | KRT | 69 |
| 16 | RAZ | 69 |

| 17 | SS | 69 |
| :---: | :---: | :---: |
| 18 | RR | 70 |
| 19 | NS | 70 |
| 20 | TAQ | 70 |
| 21 | GNN | 70 |
| 22 | NSN | 65 |
| 23 | NS | 65 |
| 24 | AS | 65 |
| 25 | R | 66 |
| 26 | E | 66 |
| 27 | TOTAL | 66 |
| 28 | AVERAGE | 70,68966 |
| 29 | N=29 | TY |

The table 1 above shows the result of the students' pre test scores in writing summarizing story before the researcher give them a treatment using manga as a teaching media and before explain the summarizing story procedure. The data shows that the maximum score is 75 and the minimum score is 65 . There are 8 students who got maximum score and there
are only 4 students who got minimum score. The average score of experimental class pre test is 70,68 . While the result of post test of the experimental class are better after the researcher give students the treatment. It can described as follow:

Table 4.2

The students' post test score at experimental class

| No | NAME | SCORE |
| :---: | :---: | :---: |
| 1 | FA | 82 |
| 2 | MNB | 82 |
| 3 | FPN | 82 |
| 4 | ANF | 90 |
| 5 | YNA | 90 |
| 6 | NNH | 90 |
| 7 | FM | 90 |
| 8 | AM | 90 |
| 9 | NS | 90 |
| 10 | WNB | 90 |
| 11 |  | 90 |
| 12 |  |  |

| 13 | NJ | 90 |
| :---: | :---: | :---: |
| 14 | HZH | 85 |
| 15 | KRT | 85 |
| 16 | RAZ | 82 |
| 17 | SS | 85 |
| 18 | RR | 90 |
| 19 | NS | 90 |
| 20 | TAQ | 90 |
| 21 | GNN | 90 |
| 22 | TY | 79 |
| 23 | KSN | 90 |
| 24 | NAM | 90 |
| 25 | NS | 90 |
| 26 | AS | 82 |
| 27 | A | 82 |
| 28 | R | 82 |
| 29 | E | 82 |
| $\mathrm{N}=29$ | TOTAL | 2520 |
|  | AVERAGE | 86,89655 |

The table 2 above shows the result of the students' post test scores in writing summarizing story after the researcher give them a treatment using manga as a teaching media and after explain the summarizing story procedure. The data shows that the maximum score is 90 and the minimum score is 79 . There are 17 students who got maximum score and there are only one students who got minimum score. The average score of experimental class post test is 86,89 .

Based on the explanation above, the researcher gets the result that there is a significance improvement after given treatment. It can be seen from the average score of pre test that $70,68<86,89$. It means that using manga as teaching media to improve students writing skill in story summarizing was success.

## 2. Control Class

The writer descibes the result of pre test of the control class on the table belows:

## Table 4.3

The students' pre test score at control class

| NO | NAMA | SCORE |
| :---: | :---: | :---: |
| 1 | GI | 67 |

| 2 | RA | 67 |
| :---: | :---: | :---: |

| 28 | FBR | 67 |
| 29 | TOTAL | 67 |
| 29 | AVERAGE | 2021 |
|  |  | 69,68966 |

The table 3 above shows the result of the students' pre test scores in writing summarizing story. The data shows that the maximum score is 75 and the minimum score is 65 . There are 11 students who got maximum scores and there are only 5 students who got minimum scores. The average score of control class pre test is 69,68 . While the result of post test of the control class are better after the researcher give students the treatment. It can be described as follow.

Table 4.4
The students' post test score at control class

| NO | NAME | SCORE |
| :---: | :---: | :---: |
| 1 | GI | 75 |
| 2 | RA | 75 |

| 25 | SZ | 79 |
| 26 | SR | 79 |
| 27 | AFA | 75 |
| 28 | FBR | 75 |
| 29 | RH | 75 |
| $\mathrm{N}=29$ | TOTAL | 2225 |
|  | AVERAGE | 76,72414 |

The table 4 above shows the result of the students' post test scores of control class in writing summarizing story. The data shows that the maximum score is 80 and the minimum score is 75 . There are 6 students who got maximum scores and there are 18 students who got minimum scores. The average score of control class post test is

76,72. While the result of post test of the control class are better after the researcher give students the treatment. It can described as follow Based on the explanation above, it shows that the result of control class doesn't have the significance improvement after given treatment. It can be seen from the average score of post test that is $76,72>69,68$. This class also experienced improvement but lower than experimental class.

## B. Data Analysis

1. Experimental Class

The researcher write show the analysis data by comparing student's score in pre test and post test. It can be seen on the table belows:

Table 4.5
The difference score between pre test and post test experiment class

| NO | NAMA | TEST |  | DEVIATION | SQUARRED <br> DEVIATION |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | X1 | X2 | ( $\mathrm{X}=\mathrm{X} 2-\mathrm{X} 1$ ) |  |
| 1 | FA | 74 | 82 | 8 | 64 |
| 2 | MNB | 74 | 82 | 8 | 64 |
| 3 | FPN | 74 | 82 | 8 | 64 |
| 4 | ANF | 74 | 90 | 16 | 256 |
| 5 | YA | 74 | 90 | 16 | 256 |

| 6 | GNH | 75 | 90 | 15 | 225 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7 | NNH | 75 | 90 | 15 | 225 |
| 8 | FM | 75 | 90 | 15 | 225 |
| 9 | AM | 75 | 90 | 15 | 225 |
| 10 | NS | 75 | 90 | 15 | 225 |
| 11 | MNB | 75 | 90 | 15 | 225 |
| 12 | W | 75 | 90 | 15 | 225 |
| 13 | NJ | 75 | 90 | 15 | 225 |
| 14 | HZH | 69 | 85 | 16 | 256 |
| 15 | KRT | 69 | 85 | 16 | 256 |
| 16 | RAZ | 69 | 82 | 13 | 169 |
| 17 | SS | 69 | 85 | 16 | 256 |
| 18 | RR | 70 | 90 | 20 | 400 |
| 19 | NS | 70 | 90 | 20 | 400 |
| 20 | TAQ | 70 | 90 | 20 | 400 |
| 21 | GNN | 70 | 90 | 20 | 400 |
| 22 | TY | 65 | 79 | 14 | 196 |
| 23 | KSN | 65 | 90 | 25 | 625 |
| 24 | NAM | 65 | 90 | 25 | 625 |
| 25 | NS | 65 | 90 | 25 | 625 |
| 26 | AS | 66 | 82 | 16 | 256 |
| 27 | A | 66 | 82 | 16 | 256 |

| 28 | R | 66 | 82 | 16 | 256 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 29 | E | 66 | 82 | 16 | 256 |
| TOTAL |  | 2050 | 2520 | 470 | 6936 |

The table 5 above shows that there are the differences between pre test and post test score of the experimental class. The different score is the result of the post test score is subtracted by pre test score. So that, there are significant differences between pre test and post test score of the experimental class, the highest difference score is 25 and the lowest is 8 . It also can be seen on the graphic belows

Graphic 4.1
The difference score between pre test and post test experiment class

The graphic 1 above shows the result of students' pre test and post test scores of experimental class. In the pre-test score, the maximum score is 75 and the minimum score is 65 . There are 8 students who got maximum score and there are only 4 students who got minimum score. While in the post-test score, maximum score is 90 and the minimum score is 79 . There are 17 students who got maximum score and there are only one students who got minimum score.

## 2. Control Class

The researcher write show the analysis data by comparing student's score in pre test and post test. It can be seen on the table belows:

## Table 4.6

The difference score between pre test and post test control class

| NO | NAMA | TEST |  | DEVIATION | SQUARRED <br> DEVIATION |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | X1 | X2 | (X=X2-X1) | X2 |
| 1 | GI | 67 | 75 | 8 | 64 |
| 2 | RA | 67 | 75 | 8 | 64 |
| 3 | TQ | 67 | 75 | 8 | 64 |
| 4 | YF | 67 | 75 | 8 | 64 |
| 5 | AJ | 67 | 75 | 8 | 64 |
| 6 | RBS | 67 | 75 | 8 | 64 |

| 7 | MAS | 67 | 75 | 8 | 64 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 8 | AIL | 67 | 75 | 8 | 64 |
| 9 | NST | 67 | 75 | 8 | 64 |
| 10 | MFH | 67 | 75 | 8 | 64 |
| 11 | ASA | 75 | 80 | 5 | 25 |
| 12 | FA | 75 | 80 | 5 | 25 |
| 13 | KNA | 75 | 80 | 5 | 25 |
| 14 | NA | 75 | 80 | 5 | 25 |
| 15 | WRNS | 75 | 80 | 5 | 25 |
| 16 | ZKM | 75 | 80 | 5 | 25 |
| 17 | AZ | 65 | 75 | 10 | 100 |
| 18 | DA | 65 | 75 | 10 | 100 |
| 19 | MZ | 65 | 75 | 10 | 100 |
| 20 | SN | 65 | 75 | 10 | 100 |
| 21 | TH | 65 | 75 | 10 | 100 |
| 22 | FH | 75 | 79 | 4 | 16 |
| 23 | IAR | 75 | 79 | 4 | 16 |
| 24 | NFH | 75 | 79 | 4 | 16 |
| 25 | SZ | 75 | 79 | 4 | 16 |
| 26 | SR | 75 | 79 | 4 | 16 |
| 27 | AFA | 67 | 75 | 8 | 64 |
| 28 | FBR | 67 | 75 | 8 | 64 |

| 29 | RH | 67 | 75 | 8 | 64 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| TOTAL |  | 2021 | 2225 | 204 | 1562 |

The table 6 above shows that there are the differences between pre test and post test score of the control class. The different score is the result of the post test score is subtracted by pre test score. So that, there is no significant differences between pre test and post test score of the control class, the highest difference score is 10 and the lowest is 4 . It also can be seen on the graphic belows:

## Graphic 4.2

The difference score between pre test and post test control class

The graphic 2 above shows the result of students' pre test and post test scores of control class. In the pre-test score, the maximum score is 75
and the minimum score is 65 . There are 11 students who got maximum scores and there are only 5 students who got minimum scores. While in the post-test score, the maximum score is 80 and the minimum score is 75. There are 6 students who got maximum scores and there are 18 students who got minimum scores.

From the data that was explained above, the researcher use $t$ test formula by the following steps as follow:

1. Determine mean score experimental class (MX), with formula:

$$
\begin{aligned}
\mathrm{MX} & =\frac{\sum X}{N} \\
& =\frac{470}{29} \\
& =16,20
\end{aligned}
$$

The result above showed about the average score (mean) at the experimental class. The researcher got the data from $\sum X_{1}, \Sigma X_{2}, \Sigma X$. The researcher calculated the data based on the formula above.
2. Determine mean score control class (MY), with formula:

$$
\begin{aligned}
\text { MY } & =\frac{\sum Y}{N} \\
& =\frac{204}{29} \\
& =7,03
\end{aligned}
$$

The result above showed about the average score (mean) at the control class. The researcher got the data from $\sum Y_{1}, \Sigma Y_{2}, \Sigma Y$. The researcher calculated the data based on the formula above.
3. Determine the total square of error in experiment class ( X ), with:

$$
\begin{aligned}
\Sigma \mathrm{X} & =\sum X^{2}-\frac{\left(\sum X\right)^{2}}{N} \\
& =8136-\frac{(470)^{2}}{29} \\
& =8136-\frac{220900}{29} \\
& =8136-7617,24 \\
& =518,76
\end{aligned}
$$

The result above showed about the quadrates score at the experimental class. The researcher got the data from $\sum X_{1}, \sum X_{2}, \Sigma \mathrm{X}$. The researcher calculated the data based on the formula above.
4. Determine the total square of error in control class $(\mathrm{Y})$, with:

$$
\begin{aligned}
\sum \mathrm{Y} & =\sum Y^{2}-\frac{(\Sigma Y)^{2}}{N} \\
& =1562-\frac{(204)^{2}}{29} \\
& =1562-\frac{41616}{29} \\
& =1562-1435,03 \\
& =126,96
\end{aligned}
$$

The result above showed about the quadrates score at the control class. The researcher got the data from $\sum Y_{1}, \sum Y_{2}, \sum Y$. The researcher calculated the data based on the formula above.
5. Calculation T-Test

$$
\begin{aligned}
& \mathrm{t}=\frac{M X-M Y}{\sqrt{\left(\frac{\sum X^{2}+\sum Y^{2}}{N X+N Y-2}\right)\left(\frac{1}{29}+\frac{1}{29}\right)}} \\
& \mathrm{t}=\frac{16,20-7,03}{\sqrt{\left(\frac{518,76+126,96}{29+29-2}\right)\left(\frac{1}{29}+\frac{1}{29}\right)}} \\
& \mathrm{t}=\frac{9,17}{\sqrt{\left(\frac{645,72}{56}\right)\left(\frac{1}{29}+\frac{1}{29}\right)}} \\
& \mathrm{t}=\frac{9,17}{\sqrt{(11,53)(0,068)}} \\
& \mathrm{t}=-\frac{9,17}{\sqrt{0,784}} \\
& \mathrm{t}=\frac{9,17}{0,885}
\end{aligned}
$$

$$
t=10,36
$$

The result above showed about the calculating t-test after the researcher got the data from $\mathrm{MX}, \mathrm{MY}, \sum X^{2}$, and $\sum Y^{2}$. The researcher calculated the data based on the formula above.
6. Determine the degree of freedom, with formula:

$$
\begin{aligned}
\mathrm{Df} \quad & =\mathrm{Nx}+\mathrm{Ny}-2 \\
& =29+29-2 \\
& =56
\end{aligned}
$$

The result above showed the score of sample both experiment and control class. The researcher used 58 students as sample for this research. 29 students are from X BAHASA as experimental class and 29 students are from X IPA 1 as control class.

Comparing " $t$ " has been tested in calculating $(t=10,36)$ and the degree of freedom (df)) for 56, the writer uset the closest "df" from $58-2=56$. So, the degree of freedom is 56 . It has been tested on the $t-$ table( $t_{o}=5 \%=2,00$ and $\left.t_{t}=1 \%=2,66\right)$. It can be known that $t_{o}>$ $t_{t} 5 \%$ and $t_{o}>t_{t} 1 \%$. It means $2,00<10,36>2,66$.

## C. The Interpretation of Data

The data shows that the students writing skill in story summarizing at tenth grade of MAN 2 Kota Serang before conducted by experiment to apply Manga as teaching media between X Bahasa as an experimental class and X IPA 1 as control class is not different significally. The mean of the pre test scores obtained by X Bahasa students' as experimental class was 70,68 and pre test scores obtained by X IPA 1 students' as controll class was 69,68 . The highest score of both classes were same in
class X Bahasa as experimental class got 75 and in the class X IPA 1 as control class got 75 . For the lowest score of both classes were same too in class X Bahasa got 65 and in the class X IPA 1 got 65.

Besides the data also shows that the students writing skill in story summarizing at tenth grade of MAN 2 Kota Serang after conducted by experiment to apply Manga as teaching media between X Bahasa as an experimental class and X IPA 1 as control class is different significally. The mean of the post test scores obtained by X Bahasa students' as experimental class was 86,89 and post test scores obtained by X IPA 1 students' as controll class was 76,72 . The highest score in class X Bahasa as experimental class got 90 and in the class X IPA 1 as control class got 80 . For the lowest score of both classes were same too in class X Bahasa got 79 and in the class X IPA 1 got 75 . The distribution scores of experimental class was $86,89-79=7,89$. While in the control class was 76,72-75=1,72.

By the degree of freedom $(\mathrm{df})=56$ and analyzed by using t -test, the researcher tested there is an effectiveness of using manga as teaching media to improve students writing skill in story summarizing, because $t$ count is higher than $t$-table in lever significance $5 \%$ and $1 \%$. The table with the level signifance of $5 \%$ is 2,00 and the lever significance of $1 \%$ is 2,66.

Based on the interpretation above t-couny > t-table. It means that there are significant effect of using manga as teaching media to improve students' writing skill in story summarizing. Hypothesis testing is used to know the significance of both variables, and tested as follow:
$\mathrm{Ha}=t_{o}>t_{t}$
$\mathrm{Ho}=t_{o}<t_{t}$
Notes:
Ha = Alternative Hypothesis
Ho $=$ Null Hypothesis
$t_{o} \quad=$ The value of t -observation
$t_{t} \quad=$ The value of t -table
To prove the data hypothesis, the data obtained from an experimental class and control class are calculated by using t-test formula with the assumption below:

If $t_{o}>t_{t}:$ The alternative hypothesis is accepted. It means there is a significant effect in using Manga as teaching media to improve students writing story summarizing skill at tenth grade senior high school in the academic year of 2018/2019.

If $t_{o}<t_{t}$ : The alternative hypothesis is rejected. It means there is no significant effect in using Manga as teaching media to improve students
writing story summarizing skill at tenth grade senior high school in the academic year of 2018/2019.

From the result conclution above, the value of $t_{o}=10,36$ the degree of freedom $(\mathrm{df})=56$. The researcher use degree of significant $5 \%=2,00$ and $1 \%=2,66$. It's mean that Ha (Alternative Hypothesis) of the research is accepted and Ho (Null Hypothesis) of the research is rejected.

After calculating the data, the researcher compares both degree of significance $5 \%$ and $1 \% t_{o}>t_{t}$ and $t_{o}>t_{t} 1 \%, 2,00<10,36>2,66$. It means that the alternative hypothesis of this research is accepted. So, it can be conclude, there is a significant effect in using Manga to improve students writing story summarizing skill at tenth grade senior high school.
