

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusions

Based on the result of data analysis and discussion that has been described previously, the researcher can draw a conclusion, the first, The level of Google for Education at State Islamic University of Sultan Maulana Hasannudin Banten with based on mean 37,53, after looking at the interpretation and categorization of the data, it is included in the good category, with an achievement level of 75,66%. Second, There was significant correlation between Google for Education with Teaching and Learning Speaking at State Islamic University of Sultan Maulana Hasannudin Banten, it can be seen with an influence level of 61,3%.

B. Suggestions

After having provided conclusion, the researcher is going to show some suggestion related with teaching and learning speaking process for some parties are for the teachers, students and other researchers

1. For student, Google for education is as product from Goggle, in it there is an application called Google Meet which can be used for learning speaking because Google meet can bring together teachers and students at the same time but in different places or often called

synchronous learning. However, one of the weaknesses is that there is no quota saver so that become a burden on student.

2. For Teacher, teaching and learning speaking it's not an easy thing to do especially in situation like this. Teacher as educators must be able to improve their performance, must be master technology and be able to quickly adapt to any situation that may be difficult.
3. For the others researchers, the researcher hopes it can be used as reference or previous study to add your theoretical framework, in order to correct the shortcomings that exist in the study and can continue to deeper research about is there have a positive correlation or not in this research.
