Hera Damayanti (161230146). The Effectiveness Students' Motivation on Learning English Through Students Teams Achievement Divisions Method (*A Study Experiment Research with the Eight Grades of SMPN 1 KARANGTANJUNG*).

ABSTRACT

The objective of the study was to know empirical evidence whether using the Student Teams Achievement Divisions (STAD) method was effective or not for students in learning English. There are 56 grade eighth students of SMPN 1 Karangtanjung who have been chosen from two classes VIIC as an experimental class and VIIB as a controlled class. It started with interview for both classes, treatment manipulation in experiment class and last conducted the questionnaire. The data was collected by questionnaire and interview by using the t-test formula. The result of statistical calculation showed, the value of t_o is 5,38. With the degree of freedom (df) is 54 is gained the value 1.67 and 2.39 on the degree of significance 5% and 1% of the table. Comparing the gained value of t_o with t_{table} , it can be seen that there is an obvious differences among the score of experiment class and control class. The t_o value is higher than the t_{table} , namely $1.67 < 5,38$ or $5,38 > 2.39$, hence the alternative hypothesis (H_a) is accepted and the null hypothesis (H_o) is rejected. Consequently, it has been proven that the using of Student Teams Achievement Divisions (STAD) method is effective for students of SMPN 1 Karangtanjung in students motivation on learning English.
